

This database lists the cell lines that are currently known to be cross-contaminated or misidentified.

Cell lines are listed in alphabetical order. Table 1 contains those cell lines where there is no authentic stock known to the list contributors. The "Contaminating Cell Line", in most cases, will have overgrown the claimed original, or will have replaced it by a technical error, and the original cells will no longer exist. Table 2 contains cell lines where some stocks have been shown to be misidentified, but where authentic stock is known to exist.

This database is meant as a preliminary guide to avoiding suspect cell lines; check each cell line that you use before you start work, to see if others have shown it to be problematic. You should also test all cell lines (e.g., by STR profiling for human cell lines) and compare with the reference stock profile before use.

Observations made in these lists are based on published reports and details obtained from contributors, cell bank websites, and Wikipedia. "Reference PubMed ID" refers to the unique ID number assigned by the PubMed database (<http://www.ncbi.nlm.nih.gov/pubmed/>).

Attributions in the last two columns indicate where these misidentifications were reported and in no way imply responsibility for the cause by the authors or institutions.

This database of cross-contaminated or misidentified cell lines is curated by the International Cell Line Authentication Committee (ICLAC). Researchers are very welcome to submit additional information regarding misidentified cell lines not listed here, authentic stocks, or any other relevant information. Confusion may also arise from two different cell lines having the same name; information on these would also be welcome. Please contact [standards@atcc.org](mailto:standards@atcc.org) and copy to the ICLAC Chair, Amanda Capes-Davis ([acapdav@gmail.com](mailto:acapdav@gmail.com)). More information on ICLAC can be found at:

[http://standards.atcc.org/kwspub/home/the\\_international\\_cell\\_line\\_authentication\\_committee-iclac](http://standards.atcc.org/kwspub/home/the_international_cell_line_authentication_committee-iclac)

The database was developed by Amanda Capes-Davis and Ian Freshney, and published in 2010. To cite the database or learn more, please refer to:

Capes-Davis A, Theodosopoulos G, Atkin I, Drexler HG, Kohara A, Macleod RA, Masters JR, Nakamura Y, Reid YA, Reddel RR, Freshney RI (2010) Check your cultures! A list of cross-contaminated or misidentified cell lines. *Int J Cancer* 127(1): 1-8. PMID: 20143388.

The authors take neither credit nor responsibility for any of the primary observations and have merely attempted to review and collate data previously available on other sites.

**Table 1. Misidentified cell lines where no authentic stock is known**

The database of cross-contaminated or misidentified cell lines consists of two tables. Table 1 (see previous pages) contains those cell lines where there is no authentic stock known to the list contributors.

**Table 2 (below) contains cell lines where some stocks have been shown to be misidentified, but where authentic stocks are known to exist.**

To help scientists obtain authentic stocks, an additional column in this table shows possible locations for authentic stock. If supplied by a cell line repository, the catalogue number is given in brackets. Repositories are listed in alphabetical order.

**Table 2. Misidentified cell lines where authentic stock is known to exist**
