

## **Antibiotic Susceptibility of *Staphylococcus epidermidis* ATCC® BAA-3173™**

| Antimicrobial | Interpretation <sup>b</sup> | Antimicrobial | Interpretation |
|---------------|-----------------------------|---------------|----------------|
| Ciprofloxacin | R                           | Oxacillin     | R              |
| Clindamycin   | R                           | Penicillin    | R              |
| Daptomycin    | S                           | Rifampin      | R              |
| Erythromycin  | R                           | Teicoplanin   | S              |
| Gentamicin    | R                           | Tetracycline  | S              |
| Linezolid     | S                           | Vancomycin    | S              |

Antibiotic susceptibility was obtained using a bioMérieux Etest and Kirby-Bauer disks.

<sup>b</sup> Parameter set: MIC Interpretation Guideline: CLSI M100Ed28E (2018)

Therapeutic Interpretation Guideline: Natural Resistance
