

Making Sense Out of Microbiome Data – The Importance of Standards

Dev Mittar, PhD
*Lead Scientist and Head of Microbiology R&D,
ATCC*

Credible Leads to Incredible™

About ATCC

- Founded in 1925, ATCC is a non-profit organization with HQ in Manassas, VA, and an R&D and Services center in Gaithersburg, MD
- World's premier biological materials resource and standards development organization
 - 5,000 cell lines
 - 80,000 microorganisms
 - Genomic & synthetic nucleic acids
 - Media/reagents
- ATCC collaborates with and supports the scientific community with industry-standard biological products and innovative solutions
- Growing portfolio of products and services
- Sales and distribution in 150 countries, 15 international distributors
- Talented team of 450+ employees, over one-third with advanced degrees

Agenda

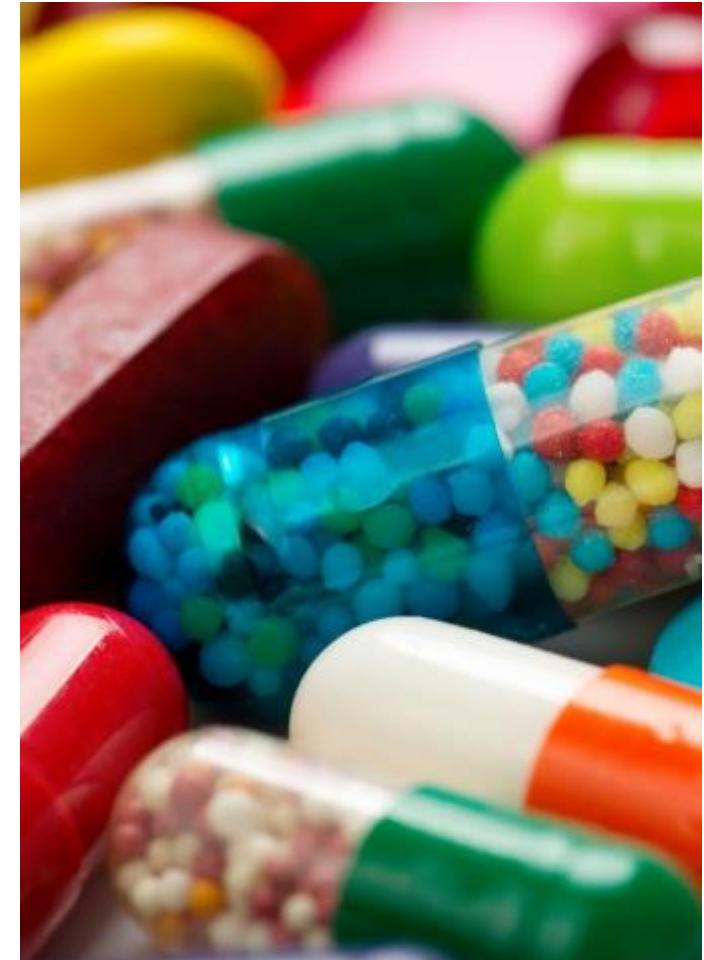

- Challenges in microbiome research and the need for standards
- The ATCC® Microbiome Standards portfolio
- Quality control methods used to evaluate ATCC® Microbiome Standards
- Applications of microbiome standards in research
- Bioinformatics analysis – One Codex

- ✗ Microbiome assay development
- ✗ Show the best data
- ✗ Recommend any specific assay, kit, protocol, or instrument

Microbiome Research

The microbiome field is rapidly moving toward translational research pertinent to human health and disease, therapeutics, and personalized medicine

Challenges in Microbiome Research

16S rRNA Profiling

- Well-established method for analyzing bacteria
 - Cost effective
 - Specific amplification
-
- Primer bias
 - Species- and strain-level identification not possible
 - Can only be used to identify bacteria

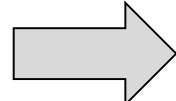

Shotgun Metagenomic Sequencing

- No primer bias
 - Species- and strain-level identification
 - Can be used to identify any type of organism
-
- Expensive
 - Background host DNA challenges
 - Bioinformatics challenges

sequencing viability coverage
extraction technology
amplification depth bioinformatics

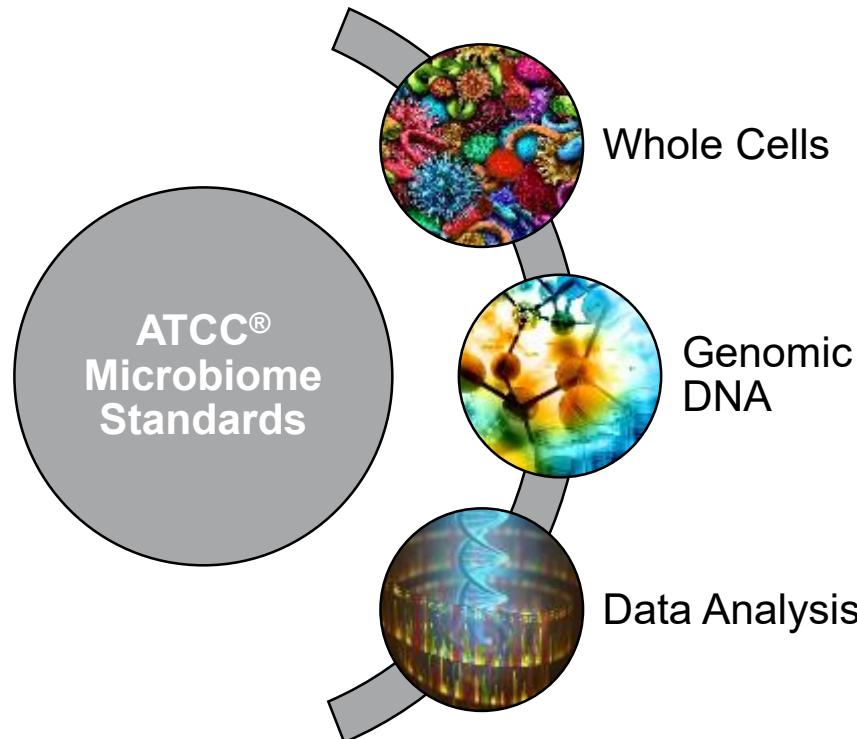

bias

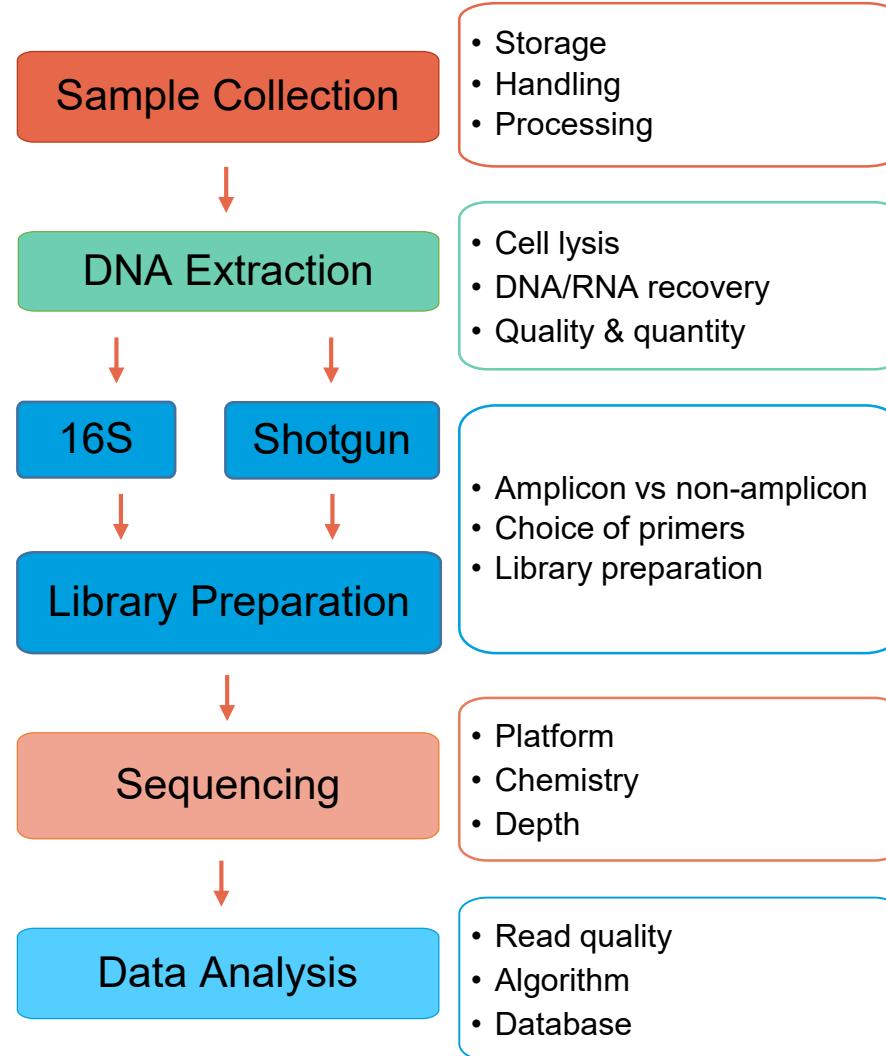

There is a need for controlled, pre-defined, standardized reference materials that can help with assay development, optimization, verification, and quality control

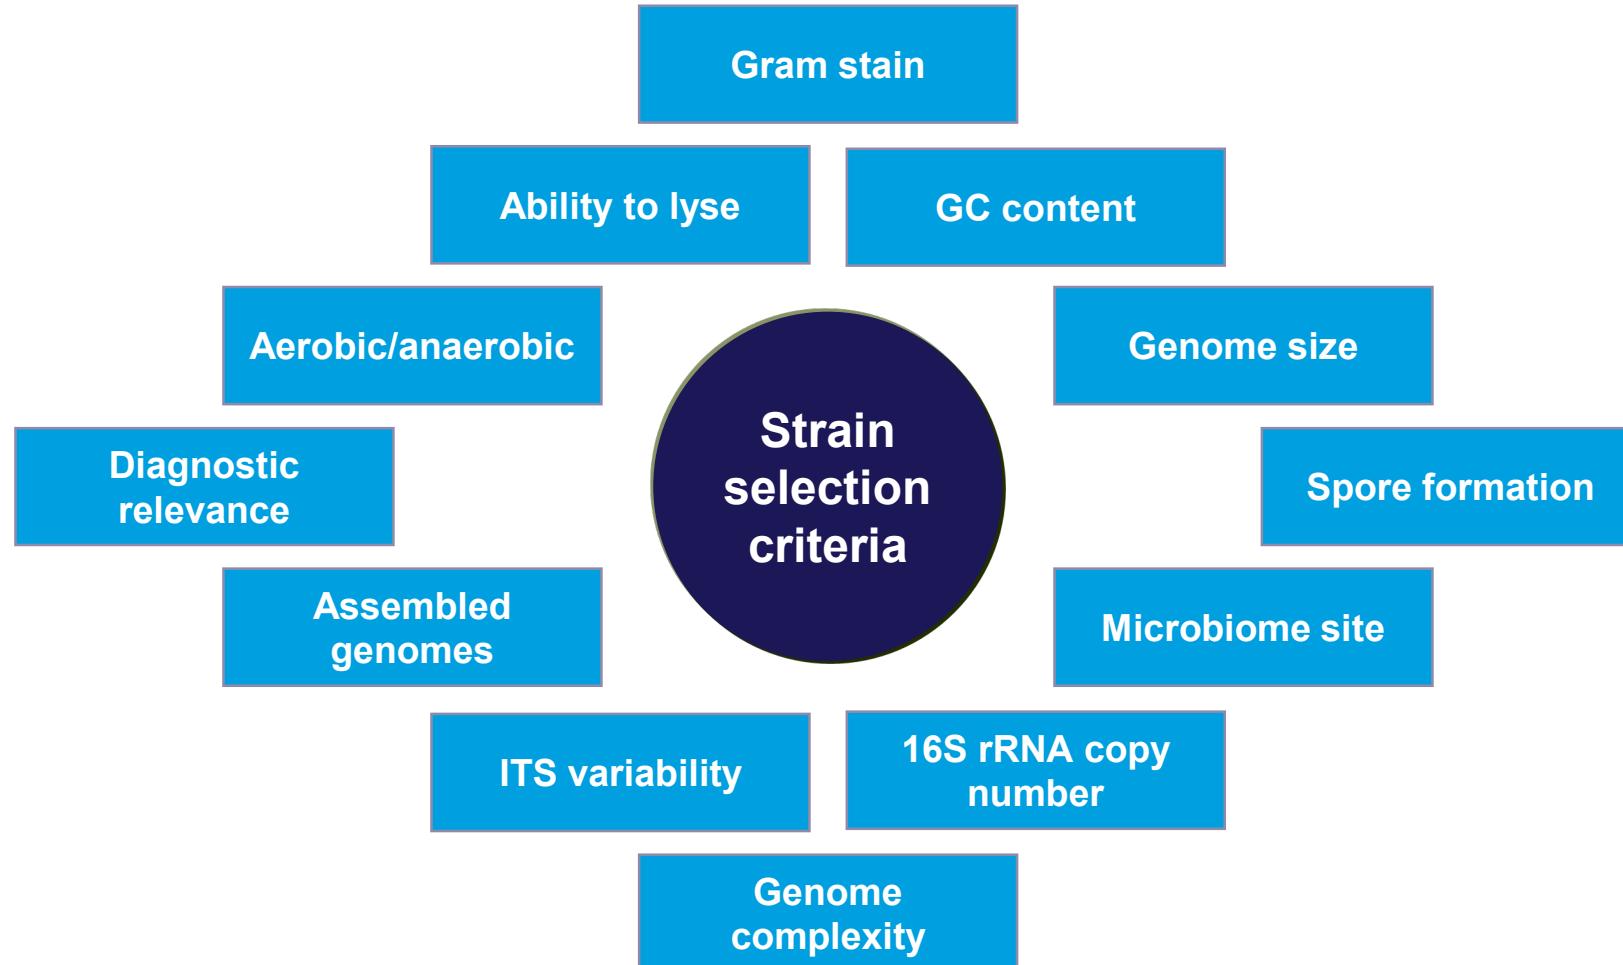

ATCC Microbiome Research Solutions

MICROBIOME WORKFLOW

Development of Mock Microbial Communities

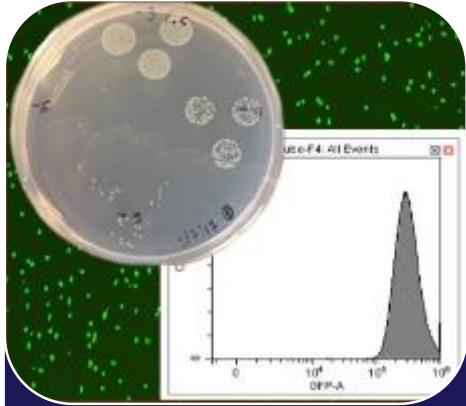

Development of Whole Cell Standards

ATCC Cultures

- Authenticated and fully characterized
- Genome sequenced
- Published in multiple databases

Growth & Quantification

- CFU
- Image cytometry
- Flow cytometry

Mix & Lyophilize

- Store at 4°C
- Ship at room temperature
- Mixed in even proportions based on number of cells

Assay optimization | DNA extraction standardization | Daily run controls for full-process monitoring | Metagenomics | Metatranscriptomics | Metabolomics

Even amounts | 2x10⁶ cells/organism | Lyophilized cells

Development of Genomic DNA Standards

ATCC Cultures

- Authenticated and fully characterized
- Genome sequenced
- Published in multiple databases

Extraction & Quality Control

- Fluorescent dye-based quantification
- Digital PCR
- WGS on individual genomes

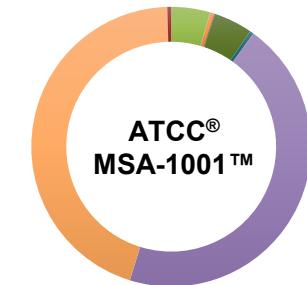

Mixed & Frozen

- Store at -20°C
- Mixed in even or staggered proportions based on copy number

Even

Staggered

Assay development | Optimization | Reproducibility |
Verification | Validation | Limit of detection

Even amounts: 2×10^6 | Staggered amounts:
 $2 \times 10^4 - 2 \times 10^7$ genome copies/organism

ATCC® Microbiome Standards Portfolio

Mock Microbial Communities

- Genomic DNA and whole cell standards
- Even and staggered mixtures comprising 10 or 20 strains
- Environmental and pathogen mixtures

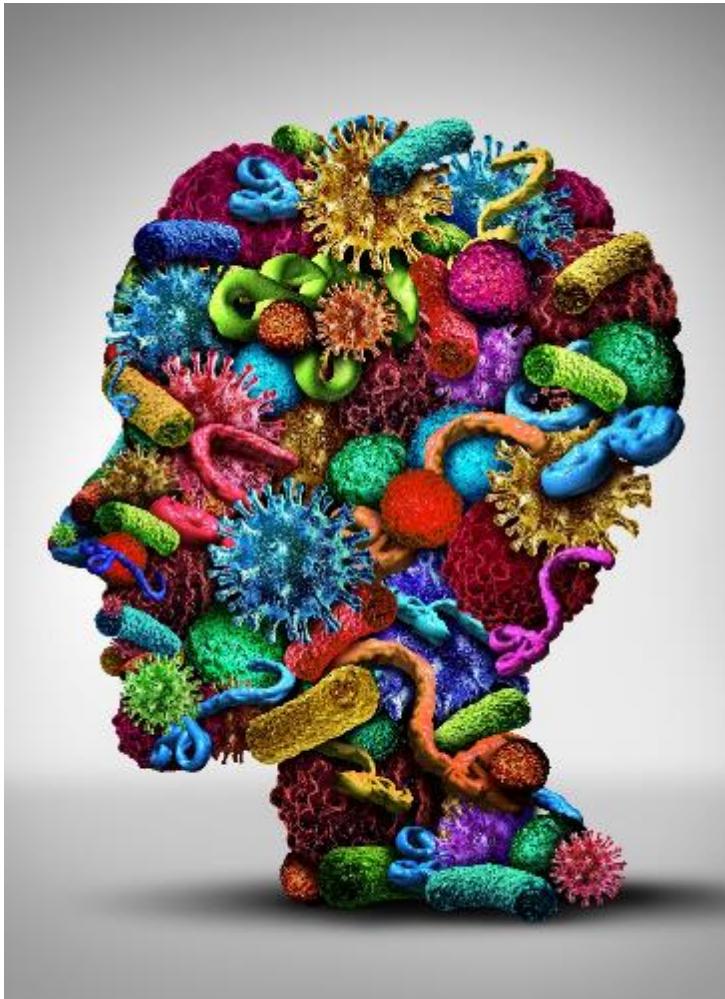

Site-specific Standards

- Genomic DNA and whole cell standards
- Even mixtures of 6-12 strains
- Bacterial strains prevalent in the oral, skin, gut, and vaginal microbiome

Bundled with bioinformatics analysis on the One Codex platform

Standards for Assay Optimization

Standard	Preparation	ATCC® Catalog No.	Number of Organisms	Composition	Complexity	Importance
Mock Microbial Communities	Genomic DNA	MSA-1000™	10	Even	Medium	Standards for assay development and optimization
		MSA-1001™	10	Staggered	Medium	
		MSA-1002™	20	Even	High	
		MSA-1003™	20	Staggered	High	
	Whole Cells	MSA-2003™	10	Even	Medium	
		MSA-2002™	20	Even	High	
Metagenomic Control for Pathogen Detection	Genomic DNA	MSA-4000™	11	Staggered	Medium	NGS-based pathogen detection
ABRF-MGRG Metagenomics Reference Standards	Genomic DNA	MSA-3000™	6	Even	Low	Environmental studies
		MSA-3001™	10	Even	Medium	
		MSA-3002™	10	Staggered	Medium	

Site-specific Microbiome Standards

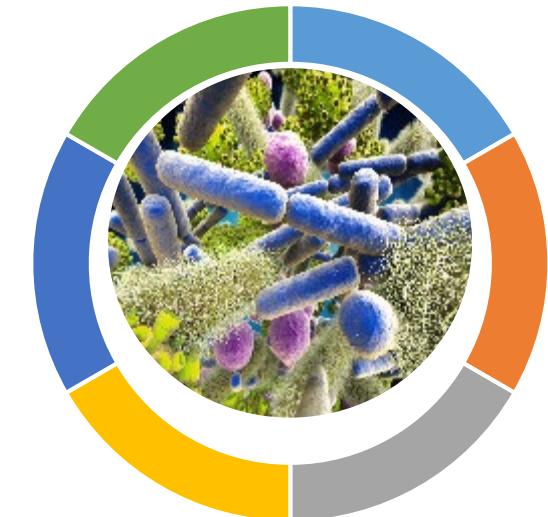

- ORAL MICROBIOME**
 - MSA-1004™ - Genomic DNA
 - MSA-2004™ - Whole cells
- SKIN MICROBIOME**
 - MSA-1005™ - Genomic DNA
 - MSA-2005™ - Whole cells
- GUT MICROBIOME**
 - MSA-1006™ - Genomic DNA
 - MSA-2006™ - Whole cells
- VAGINAL MICROBIOME**
 - MSA-1007™ - Genomic DNA
 - MSA-2007™ - Whole cells

Site-specific microbiome standards comprise normal and atypical flora representing specific human microbiome sites

Genomic DNA

Whole Cells

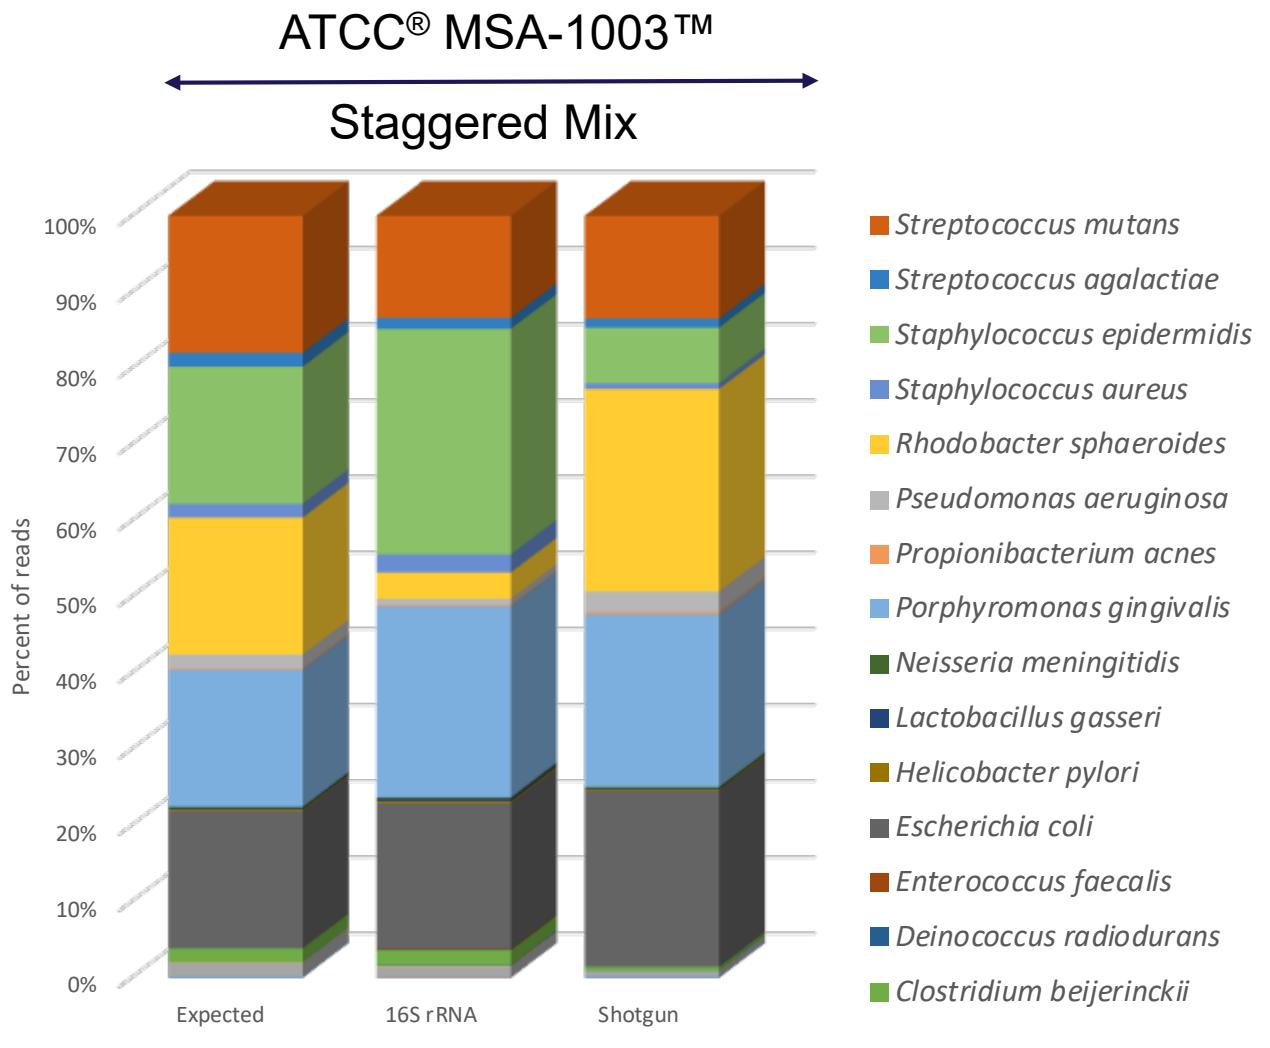

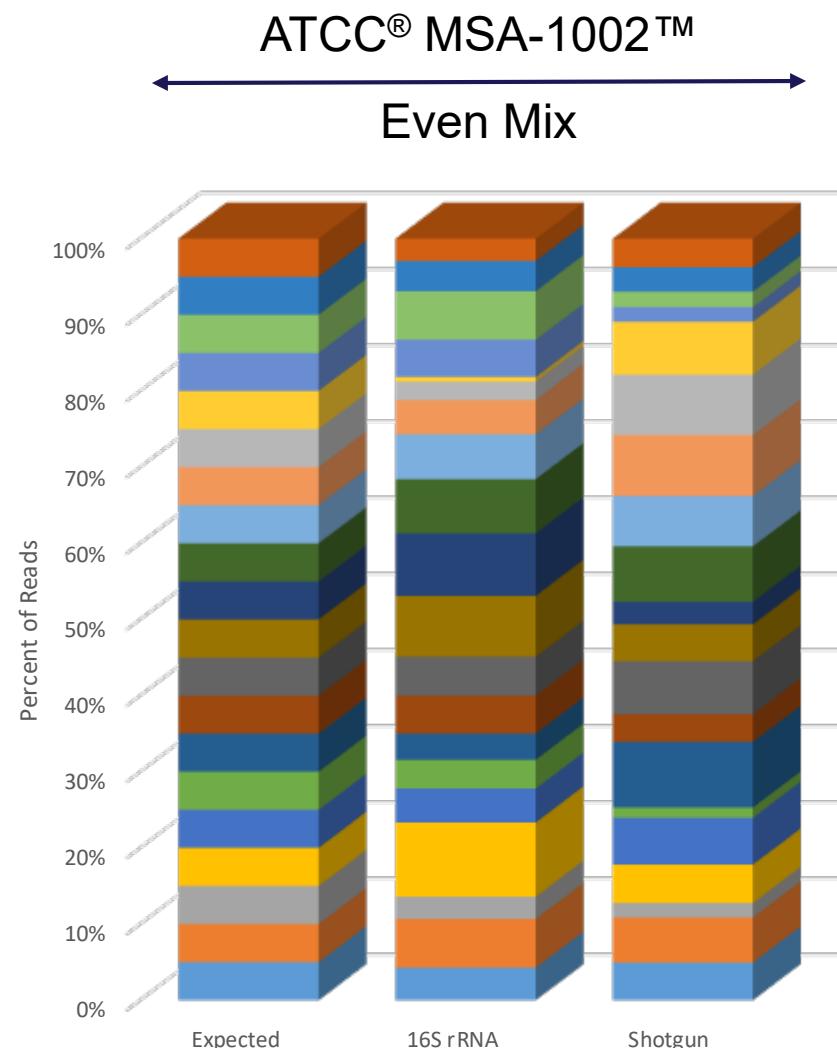

Even mixtures: 2×10^7 cells or genome copies/organism

Daily run parallel controls with organisms prevalent in normal and disease states of the sites

QC methods used to evaluate ATCC® Microbiome Standards

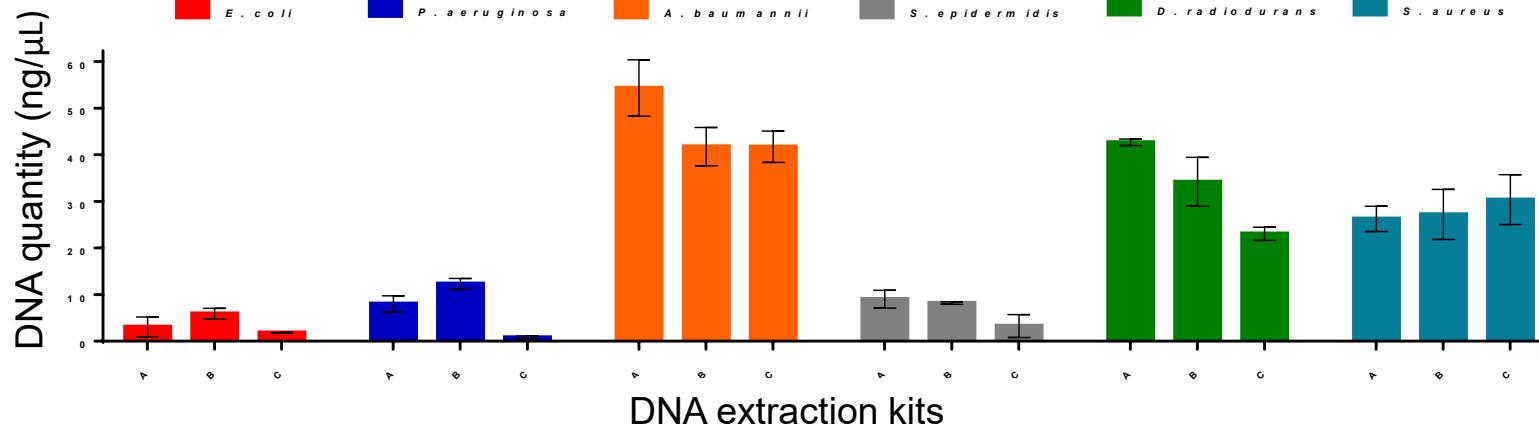

16S rRNA and Shotgun Analyses are Used in our QC Testing

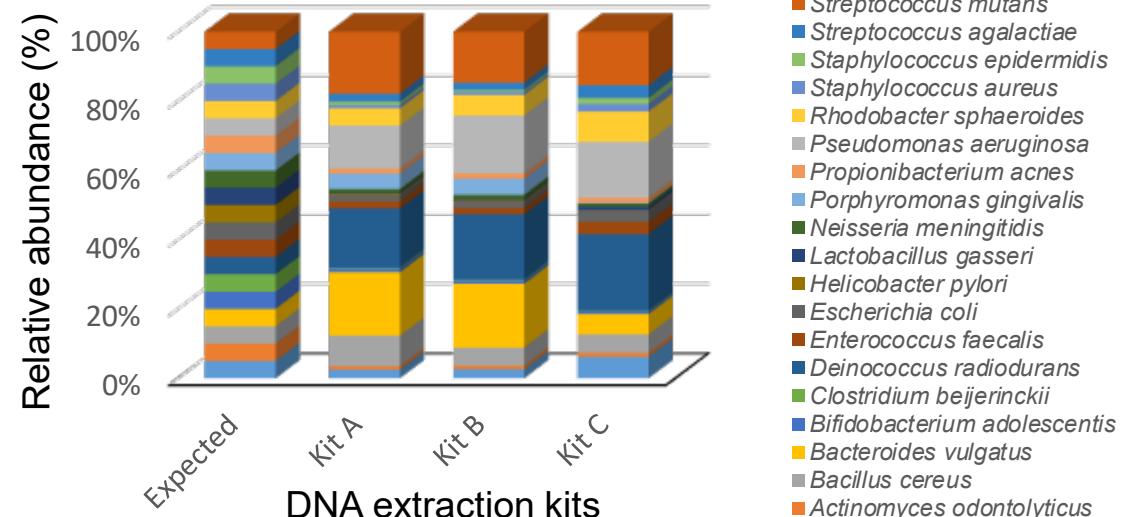

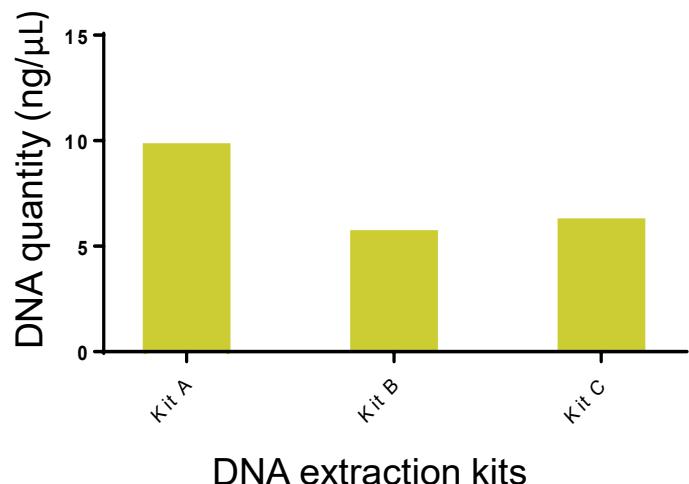

Data from Illumina® MiSeq® (16S V1/V2 & shotgun) - One Codex Analysis

DNA Extraction is the Most Important Step

Selected individual strains

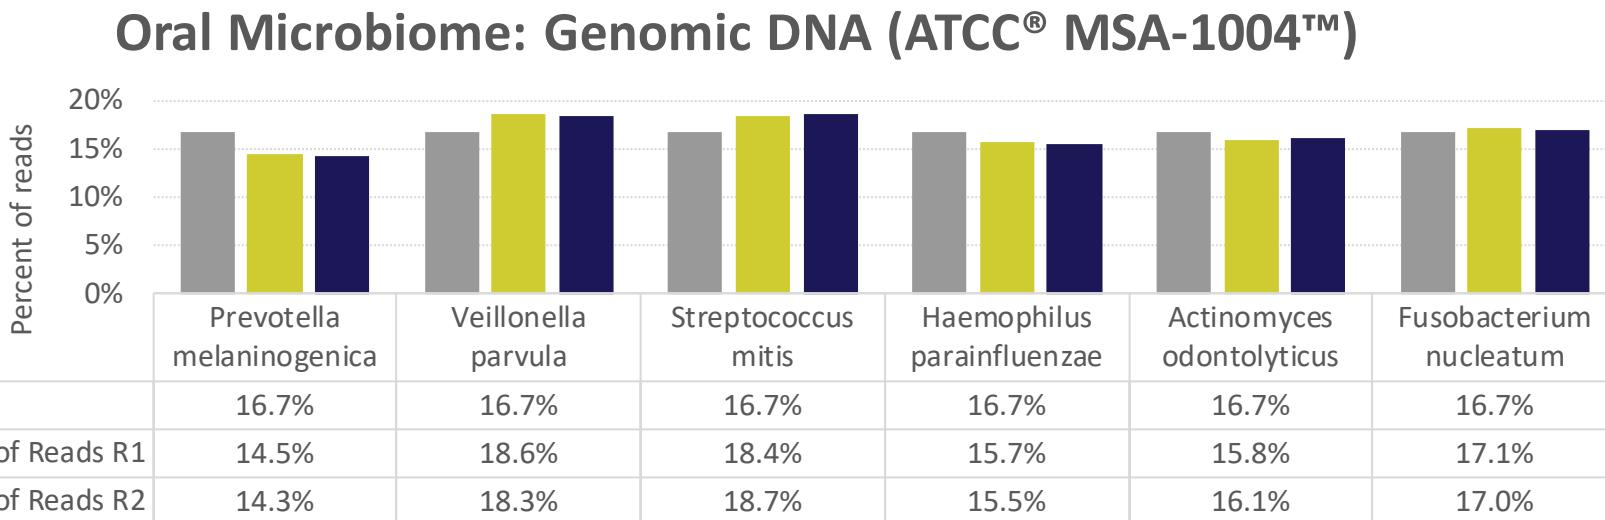

Mock microbial community (ATCC® MSA-2002™)

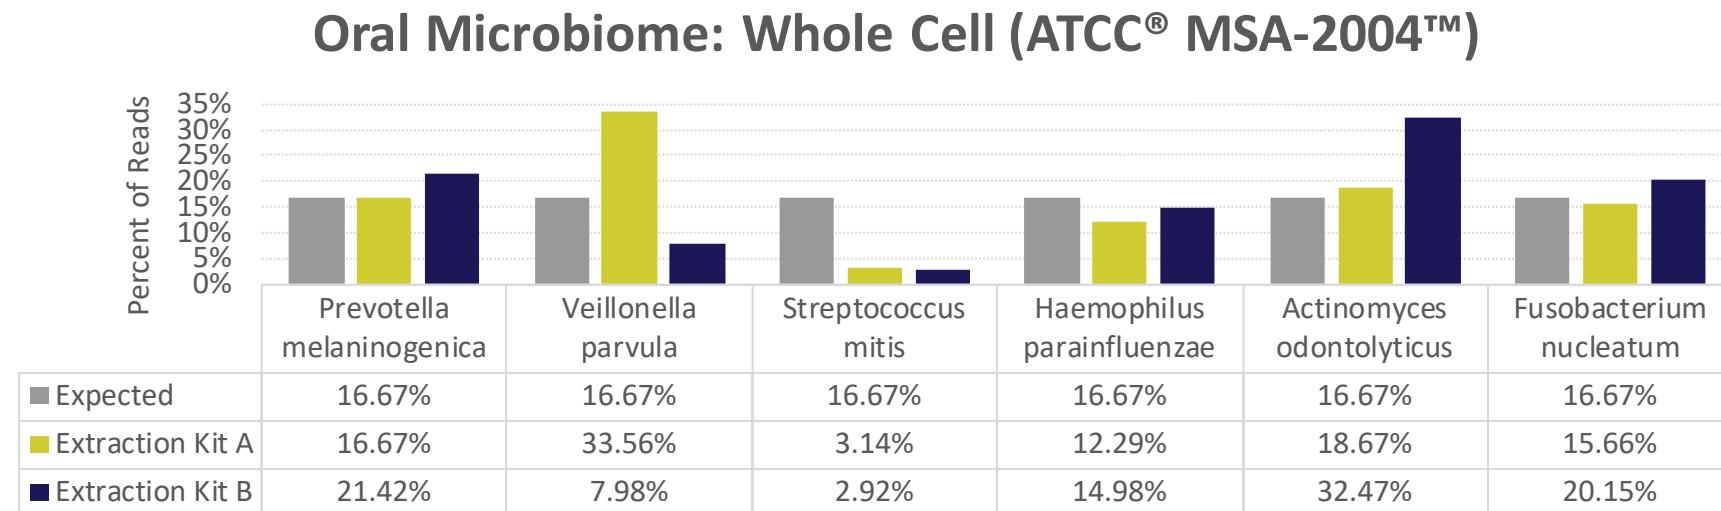

Quality Control Challenges

Accuracy and reproducibility were analyzed over two different runs.

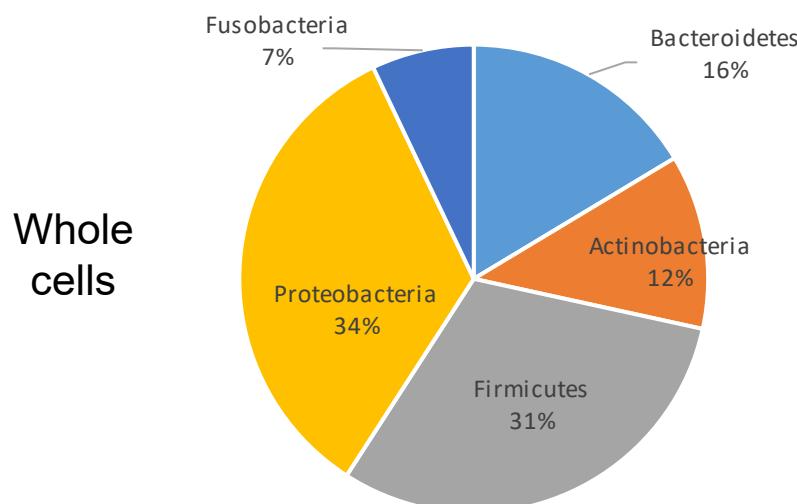

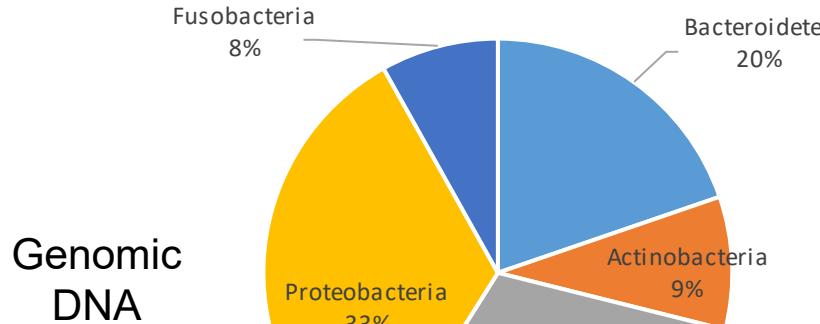

DNA was extracted with two different kits. Variations in the observed vs expected ratios were seen.

Phylum-, Genus-, and Species-Level Taxonomy

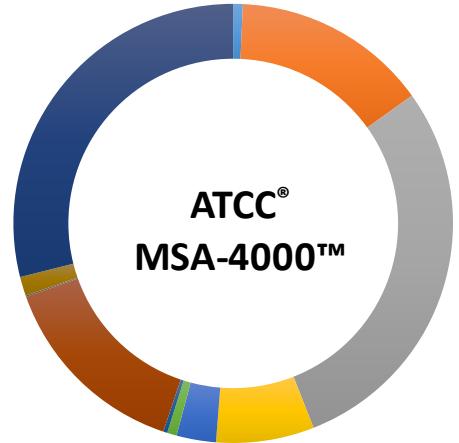

Gut Microbiome: Genomic DNA (ATCC® MSA-1005™) & Whole Cell (ATCC® MSA-2005™)

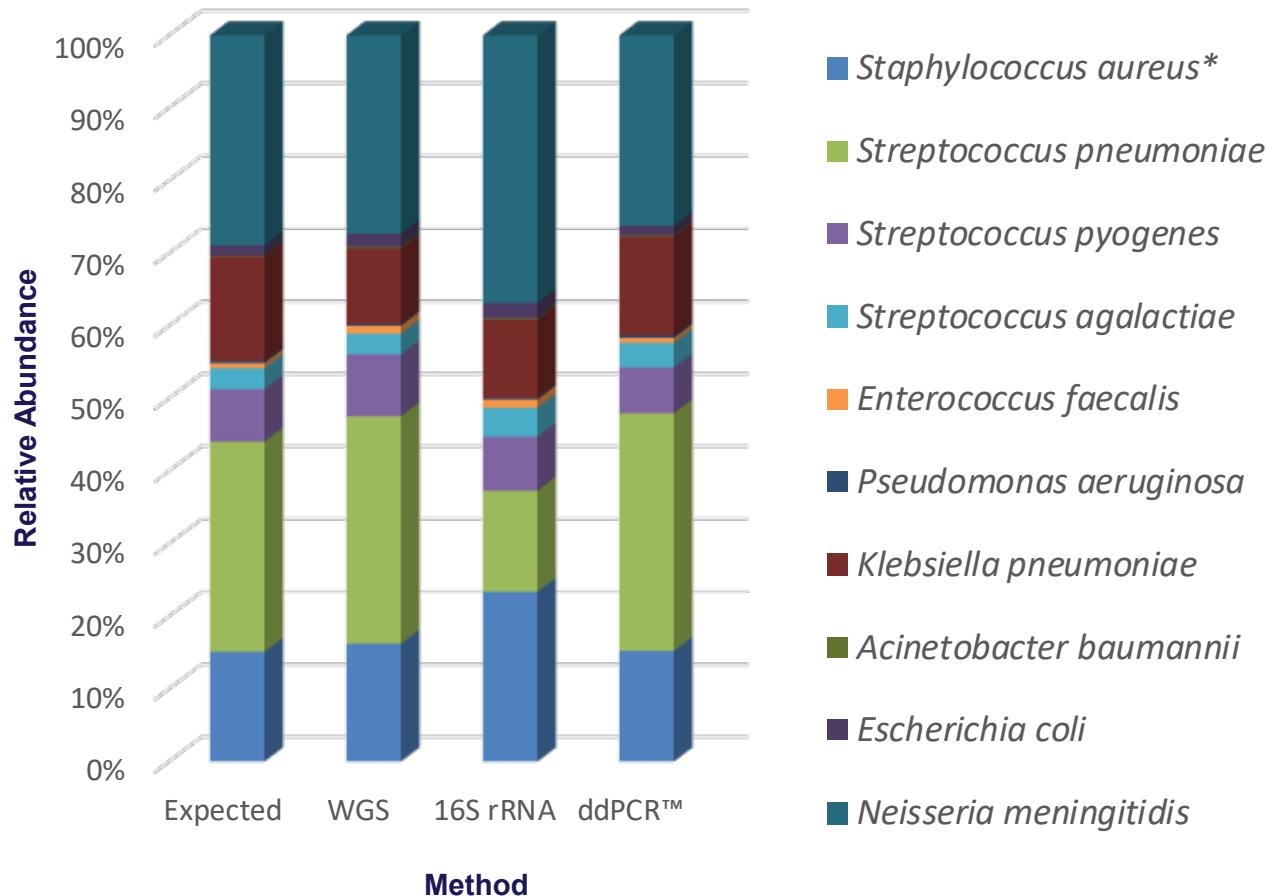

Taxonomic Analysis via 16S rRNA Assay (V1/V2 primers)

Phylum	Species	Expected	Genomic DNA	Whole cell
Bacteroidetes	<i>Bacteroides fragilis</i>	8.33%	9.87%	5.43%
	<i>Bacteroides vulgatus</i>	8.33%	9.87%	10.95%
Actinobacteria	<i>Bifidobacterium adolescentis</i>	8.33%	9.16%	12.05%
	<i>Clostridium difficile</i>	8.33%	8.96%	8.84%
Firmicutes	<i>Enterococcus faecalis</i>	8.33%	10.38%	12.01%
	<i>Lactobacillus plantarum</i>	8.33%	10.70%	9.84%
Proteobacteria	<i>Enterobacter cloacae</i>	8.33%	4.31%	5.33%
	<i>Escherichia coli</i>	8.33%	6.54%	5.34%
	<i>Helicobacter pylori</i>	8.33%	14.66%	15.33%
	<i>Salmonella enterica</i>	8.33%	3.09%	5.37%
Fusobacteria	<i>Yersinia enterocolitica</i>	8.33%	4.34%	2.44%
	<i>Fusobacterium nucleatum</i>	8.33%	8.11%	7.06%

Digital PCR to Determine Genome Copy Number

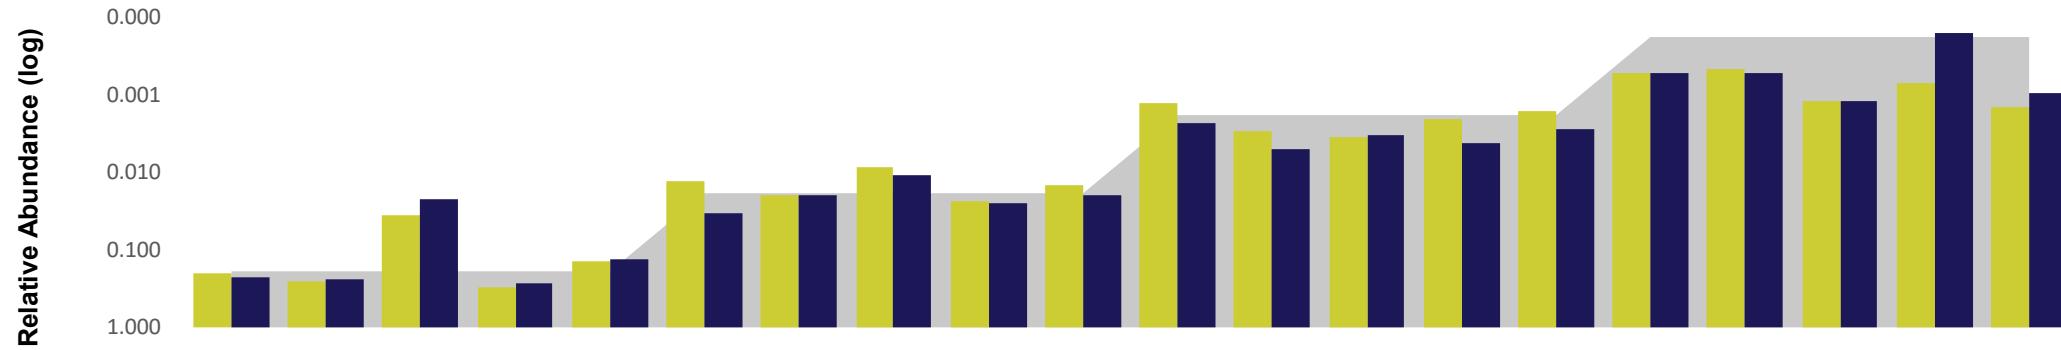

Staggered amounts: 2.5×10^3 – 2×10^5 genome copies/organism
(Quantification by digital PCR)
Assay development, optimization, reproducibility, verification, validation, and limit of detection

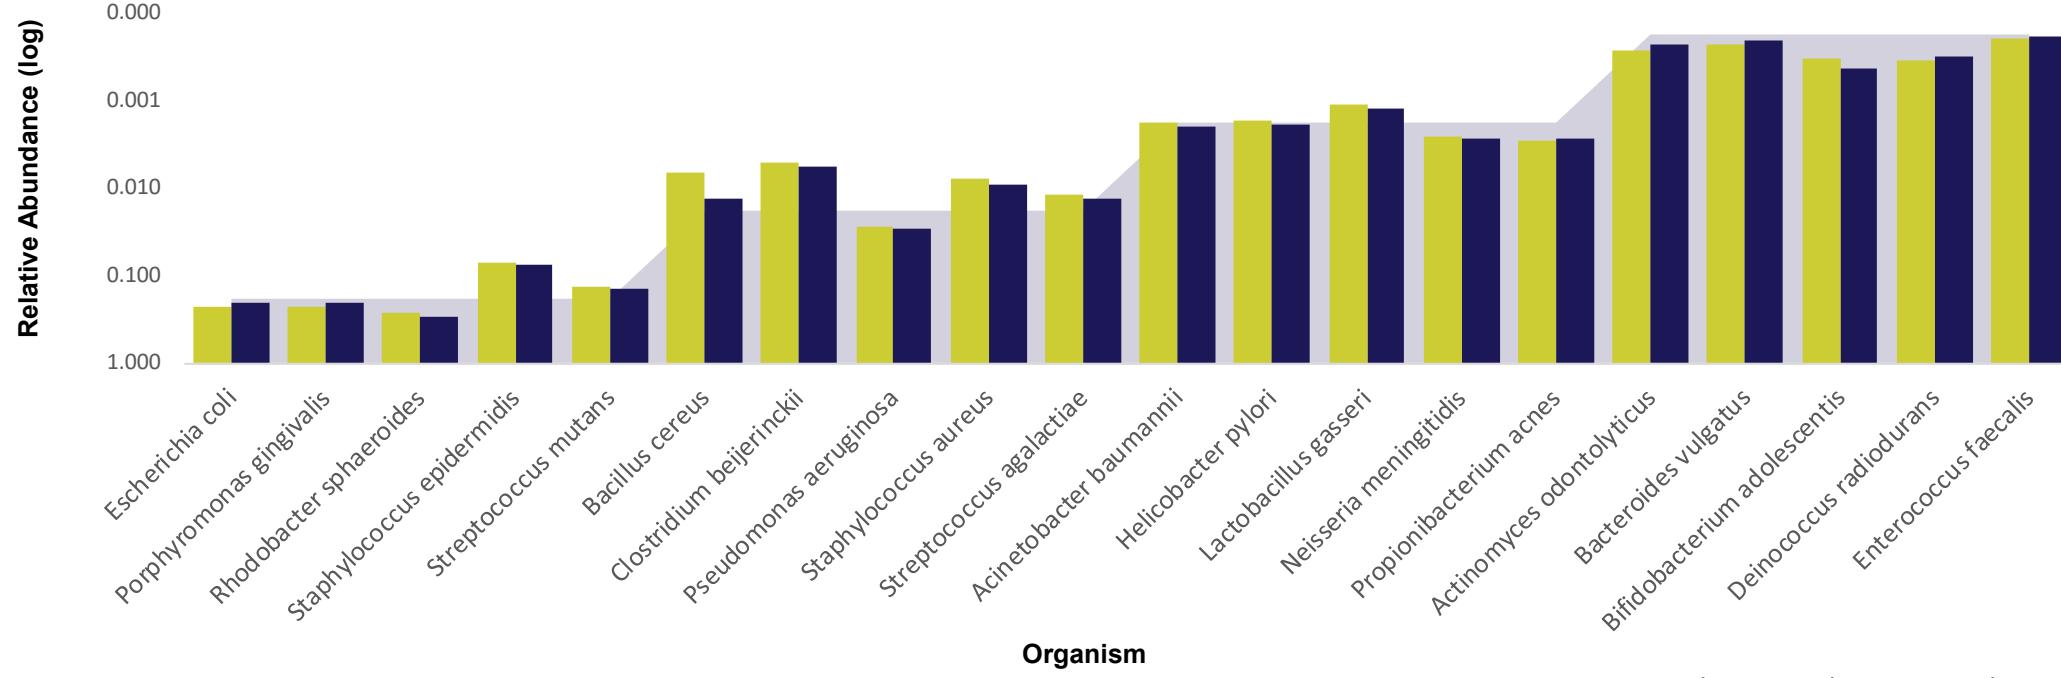

*The percent relative abundance of *Staphylococcus aureus* includes both MRSA and MSSA.

ATCC MSA-1000™
10 Strain Even Mix Genomic Material

A mixture of nucleic acids isolated from ten (10) ATCC Genuine Cultures® and prepared with even relative abundance ratios. Order now »

ATCC MSA-1001™
10 Strain Staggered Mix Genomic Material

A mixture of nucleic acids isolated from ten (10) ATCC Genuine Cultures® and prepared with staggered relative abundance ratios. Order now »

ATCC MSA-1002™
20 Strain Even Mix Genomic Material

A mixture of nucleic acids isolated from twenty (20) ATCC Genuine Cultures® and prepared with even relative abundance ratios. Order now »

ATCC MSA-1003™
20 Strain Staggered Mix Genomic Material

A mixture of nucleic acids isolated from twenty (20) ATCC Genuine Cultures® and prepared with staggered relative abundance ratios. Order now »

ATCC MSA-4000™
Metagenomic Control Material for Pathogen Detection

A mixture of nucleic acids from 10 species (11 strains) isolated from ATCC Genuine Cultures® for clinically relevant pathogen detection. Order now »

New microbiome standards in the ATCC pipeline

Spike-in Standards for 16S rRNA Applications

Development of recombinant *E. coli* strains that with a unique tag sequence

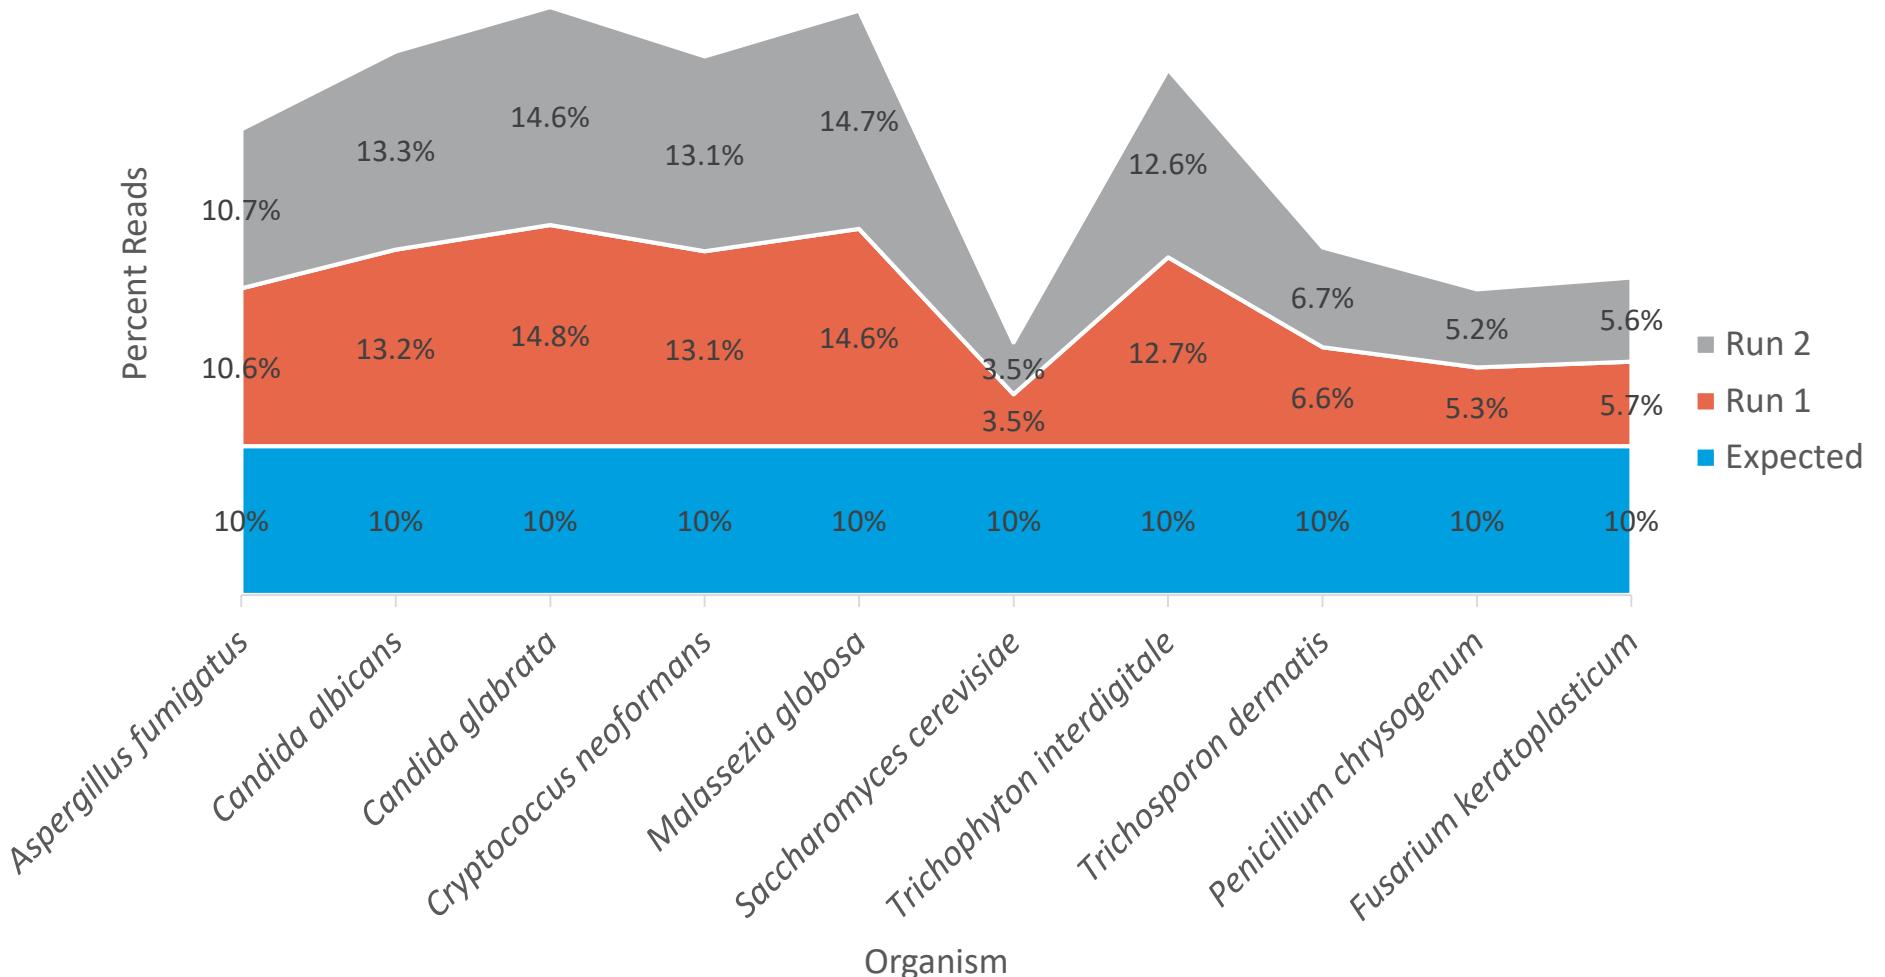

Controlled Spike-In Experiment

Mycobiome Standard

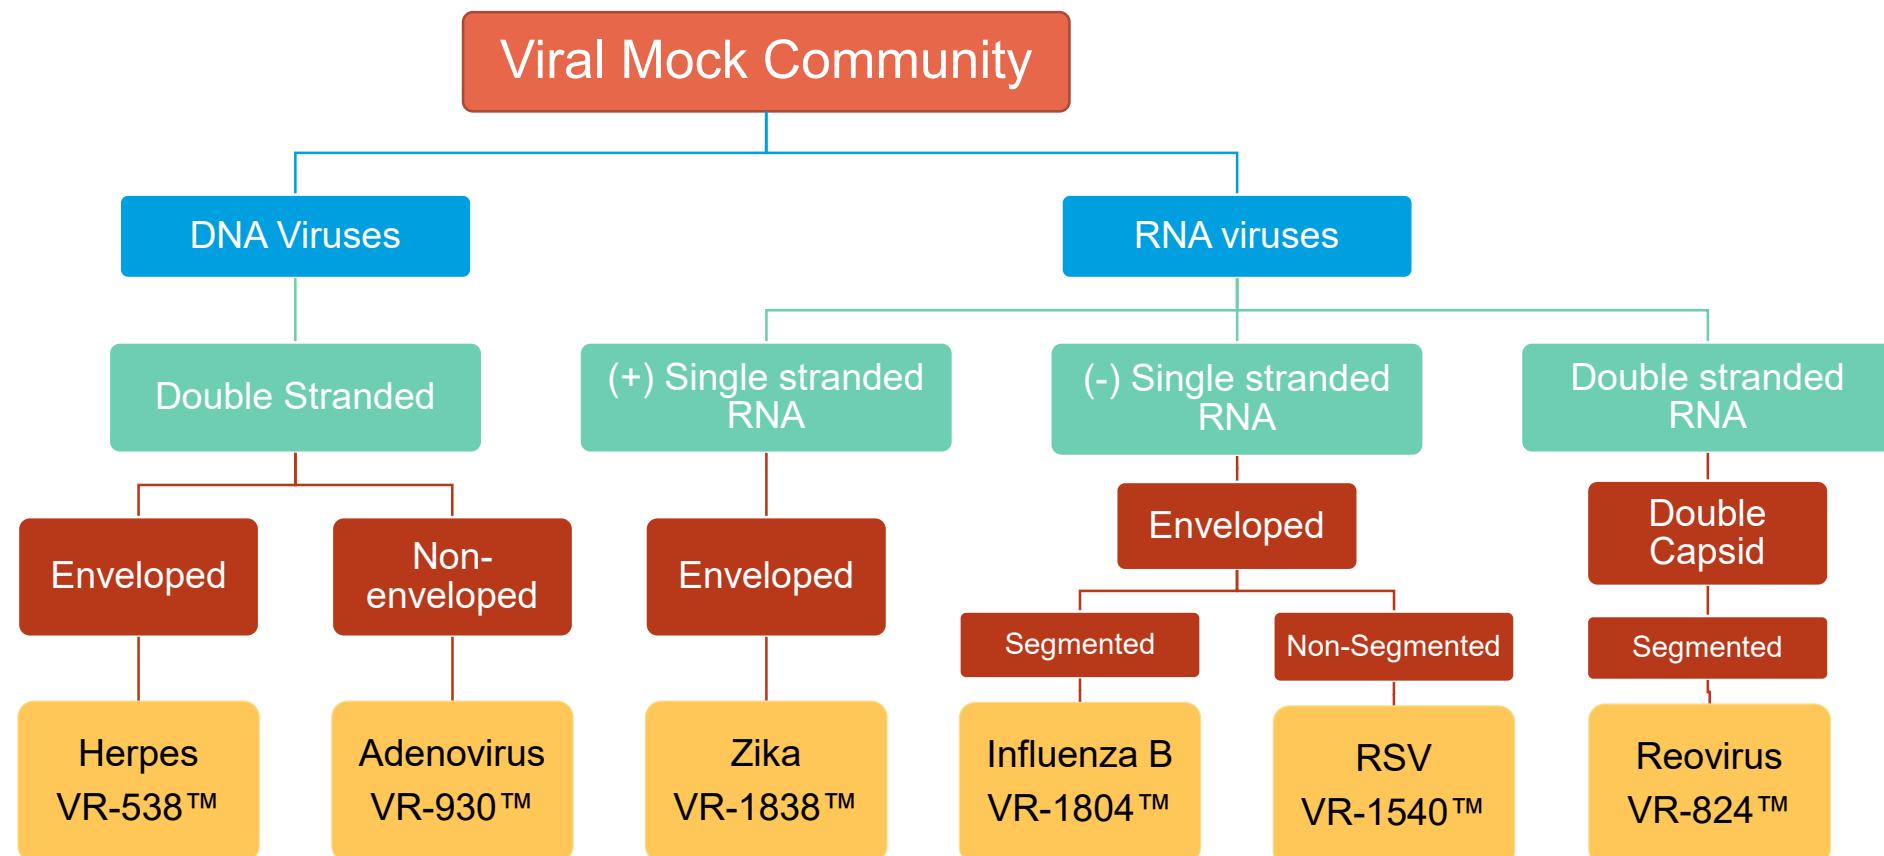

Fungal database and
bioinformatics
analysis challenges?

Shotgun Metagenomics Assay
(Two different runs)

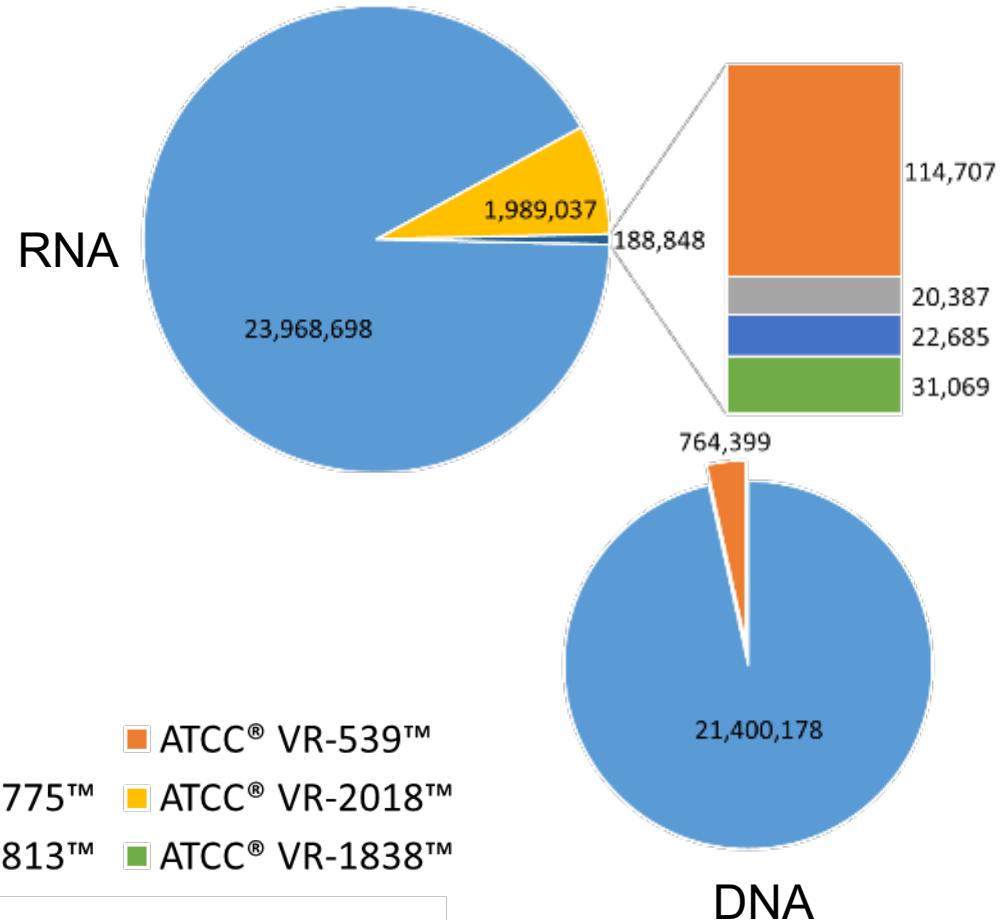

Virome Standard

Composition of an ideal virome mixed mock community representing structural diversity across multiple viral families

Virome Standard – Initial Data

Virus	Strain	ATCC® No.	Host
Human herpesvirus 1	MacIntyre	VR-539™	Vero cells
Enterovirus A71 (EV-A71)	BrCr	VR-1775™	Vero cells
Influenza B virus	B/Massachusetts/2/2012	VR-1813™	Embryonated chicken eggs
Zika virus	MR-766	VR-1838™	Vero cells
Rotavirus A	WA (TC adapted)	VR-2018™	MA104 Clone 1 cells

ATCC® Microbiome Standards Portfolio

Mock Microbial Communities

- Genomic DNA and whole cell standards
- Even and staggered mixtures comprising 10 or 20 strains
- Environmental and pathogen mixtures

Site-specific Standards

- Genomic DNA and whole cell standards
- Even mixtures of 6-12 strains
- Bacterial strains prevalent in the oral, skin, gut, and vaginal microbiome

Spike-In Standards

- Recombinant strains with a unique DNA tag stably integrated into the chromosome
- Recombinant standards include the Gram negative and Gram positive bacteria

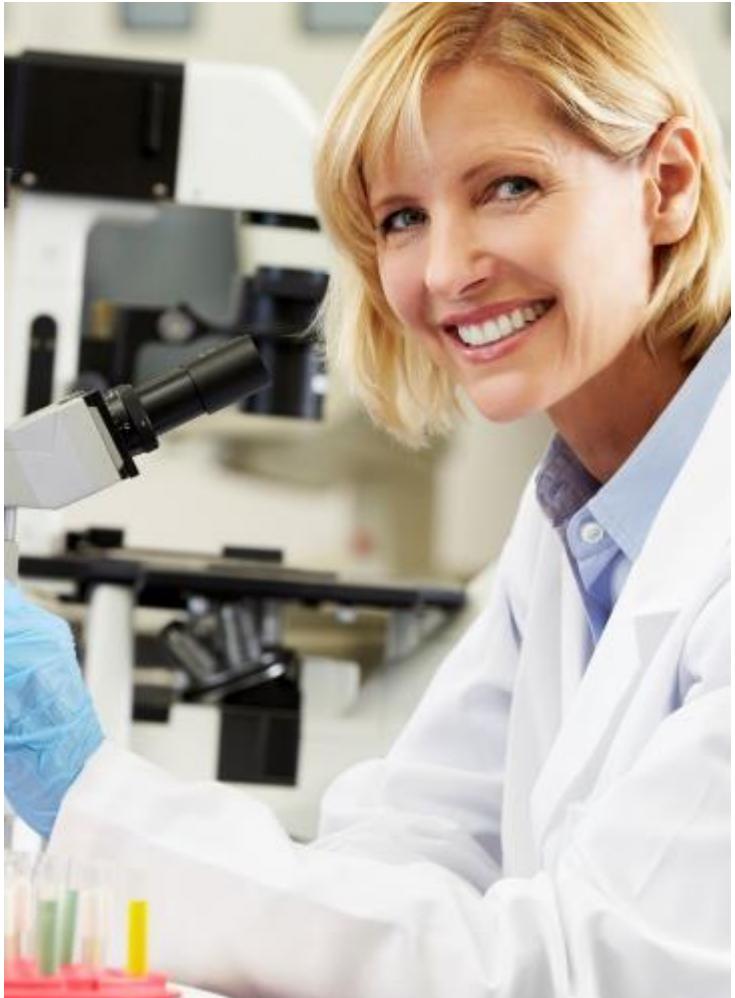

New Products

- Genomic DNA and whole cell mock communities representing:
 - Virome
 - Mycobiome

Bundled with data analysis on the One Codex platform
