

# *Riemerella anatipestifera* corrig. (Hendrickson and Hilbert) Segers et al.

11845™

## Description

*Riemerella anatipestifera* is a whole-genome sequenced bacterial type strain that was isolated in the United States from duck blood.

**Strain designation:** [CCUG 14215, LMG 11054, MCCM 00568]

**Deposited As:** *Moraxella anatipestifer* (Hendrickson and Hilbert) Bruner and Fabricant

**Type strain:** Yes

---

## Storage Conditions

**Product format:** Freeze-dried

**Storage conditions:** 2°C to 8°C

---

## Intended Use

This product is intended for laboratory research use only. It is not intended for any animal or human therapeutic use, any human or animal consumption, or any diagnostic use.

---

## BSL 2

ATCC determines the biosafety level of a material based on our risk assessment as guided by the current edition of *Biosafety in Microbiological and Biomedical Laboratories (BMBL)*, U.S. Department of Health and Human Services. It is your responsibility to understand the hazards associated with the material per your organization's policies and procedures as well as any other applicable regulations as enforced by your local

11845

or national agencies.

ATCC highly recommends that appropriate personal protective equipment is always used when handling vials. For cultures that require storage in liquid nitrogen, it is important to note that some vials may leak when submersed in liquid nitrogen and will slowly fill with liquid nitrogen. Upon thawing, the conversion of the liquid nitrogen back to its gas phase may result in the vial exploding or blowing off its cap with dangerous force creating flying debris. Unless necessary, ATCC recommends that these cultures be stored in the vapor phase of liquid nitrogen rather than submersed in liquid nitrogen.

---

### **Certificate of Analysis**

For batch-specific test results, refer to the applicable certificate of analysis that can be found at [www.atcc.org](http://www.atcc.org).

---

### **Growth Conditions**

**Medium:**

ATCC Medium 4: Rabbit blood Medium

**Temperature:** 37°C**Atmosphere:** 95% Air, 5% CO<sub>2</sub>

---

### **Handling Procedures**

1. Open vial.
2. Using a single tube of #4 broth (5 to 6 mL), withdraw approximately 0.5 to 1.0 mL with a Pasteur or 1.0 mL pipette. Rehydrate the entire pellet.
3. Aseptically transfer this aliquot back into the broth tube. Mix well.

## ***Riemerella anatipestifera* corrig. (Hendrickson and Hilbert) Segers et al.**

11845

4. You may use several drops of the suspension to inoculate a second tube of #4 broth, a #4 slant, and/or #4 plate. However, it is advisable to establish good growth in the primary tube (24-48 hours) before making subsequent transfers.
  5. Incubate the tubes and plate at 37°C with 5% CO<sub>2</sub> for 24-48 hours.
- 

### **Notes**

An atmosphere of 5% CO<sub>2</sub> enhances growth but is not required.

Additional information on this culture is available on the ATCC® web site at [www.atcc.org](http://www.atcc.org).

### **Warranty**

The product is provided 'AS IS' and the viability of ATCC® products is warranted for 30 days from the date of shipment, provided that the customer has stored and handled the product according to the information included on the product information sheet, website, and Certificate of Analysis. For living cultures, ATCC lists the media formulation and reagents that have been found to be effective for the product. While other unspecified media and reagents may also produce satisfactory results, a change in the ATCC and/or depositor-recommended protocols may affect the

11845

recovery, growth, and/or function of the product. If an alternative medium formulation or reagent is used, the ATCC warranty for viability is no longer valid. Except as expressly set forth herein, no other warranties of any kind are provided, express or implied, including, but not limited to, any implied warranties of merchantability, fitness for a particular purpose, manufacture according to cGMP standards, typicality, safety, accuracy, and/or noninfringement.
