Escherichia coli bacteriophage Lambda W60

BAA-3382™

Description

This product is an ATCC manufactured and accessioned progeny of 97537.
Strain designation: LambdaW60 [W60]
Deposited As: ATCC accessioned progeny of *Escherichia coli* bacteriophage Lambda W60 cited as 97537.
Shipping information: bacteria-free lysate

Storage Conditions

Product format: Freeze-dried
Storage conditions: 2°C to 8°C

Intended Use

This product is intended for laboratory research use only. It is not intended for any animal or human therapeutic use, any human or animal consumption, or any diagnostic use.

BSL 1

ATCC determines the biosafety level of a material based on our risk assessment as guided by the current edition of *Biosafety in Microbiological and Biomedical Laboratories (BMBL)*, U.S. Department of Health and Human Services. It is your responsibility to understand the hazards associated with the material per your organization's policies and procedures as well as any other applicable regulations as enforced by your local

or national agencies.

ATCC highly recommends that appropriate personal protective equipment is always used when handling vials. For cultures that require storage in liquid nitrogen, it is important to note that some vials may leak when submersed in liquid nitrogen and will slowly fill with liquid nitrogen. Upon thawing, the conversion of the liquid nitrogen back to its gas phase may result in the vial exploding or blowing off its cap with dangerous force creating flying debris. Unless necessary, ATCC recommends that these cultures be stored in the vapor phase of liquid nitrogen rather than submersed in liquid nitrogen.

Certificate of Analysis

For batch-specific test results, refer to the applicable certificate of analysis that can be found at www.atcc.org.

Growth Conditions

Host: *Escherichia coli* MG1655 (ATCC 47076)
Medium:
ATCC Medium 1065: LB Agar/Broth, Miller
Temperature: 37°C
Atmosphere: Aerobic

Handling Procedures

1. Follow general procedures given below for phage propagation.
2. *Escherichia coli* strain MG1655 (ATCC 47076) is the recommended host.

GENERAL PROCEDURES FOR THE PROPAGATION OF BACTERIOPHAGE

To recover phage from freeze-dried or frozen vial:

a. Prepare an actively growing culture of the recommended host strain before opening the phage specimen. The host should be 18-24 hours old.
b. Pick one colony from the isolation plate and homogenize in 5 mL of the appropriate broth. Incubate at 37°C while shaking until the growth reaches OD $_{600}$ of 0.3 to 0.4.
c. Infect each 5 mL culture with 300 µL of the bacteriophage. Add 25 µL each of 2M $CaCl_2$ and 2M $MgCl_2$. Shake at 130 rpm at 37°C overnight. After 16 to 18 hours, centrifuge phage culture at 4000 g for 10 minutes. Filter the lysate with a 0.2 µm PES sterile filter then filter again with another 0.2 µm PES sterile filter. The filtrate can be stored at 4°C.
d. To perform a spot titer, warm one or two plates at 37°C. Overlay the surface with 2.5 mL of melted 0.5% agar (same medium) which contains 50 µL of an 18-24 hour host culture. The soft agar should be maintained at 43°C to 45°C until ready to pour. It may be advisable to use a water bath. Allow overlay to harden.
e. The phage lysate can be serial diluted in a 96-well plate in quadruplicate (if desired). Aliquot 90 µL of broth medium (containing 25 µL each of $CaCl_2$ and $MgCl_2$ per 5 mL of broth) into each well. Add 10 µL of phage lysate to each well and mix. Pass 10 µL to each of the next set of wells and mix. Continue to the desired number of passages.
f. Spot 2 µL of each dilution on the plate from step d. Up to 8 dilutions can fit on a 90 mm petri dish. After overnight incubation, lysis should be visible. At the higher dilutions, individual plaques should be countable. pfu/mL = average plaque count / [(dilution factor) ($2x10^{-3}$mL)]
NOTE: Spotting the phage on plates makes visualizing the lysis easier. If phage is added directly to soft-agar before pouring plates, hazy or tiny plaques may be difficult to see. Resistant host bacteria may also mask plaque formation.

To propagate phage:

a. Determine the total volume needed and place this amount of broth in a flask. Add a small amount of overnight host culture to the flask and incubate at 37°C while shaking until the growth reaches OD_{600} of 0.3 to 0.4.
b. Infect with the calculated volume of phage lysate using the following formula. Volume of phage to add (ml) = ($8x10^8$ x total culture volume in ml x OD_{600} x

MOI) / phage titer (PFU/ml). Add 25 µL each of 2M $CaCl_2$ and 2M $MgCl_2$ per 5 mL of broth. Shake at 130 rpm at 37°C overnight.

c. Centrifuge phage culture at 4000 g for 10 minutes. Filter the lysate with a 0.2 µm PES sterile filter then filter again with another 0.2 µm PES sterile filter. The filtrate can be stored at 4°C.
NOTE: Lysates should remain viable under refrigeration for long periods. They may also be frozen with or without cryoprotectant. If available, liquid nitrogen storage is the best method for long term storage. Most phage can also be freeze-dried. ATCC® uses double strength skim milk mixed half and half with the filtrate. Most phage can also be freeze-dried. ATCC® uses double strength skim milk mixed half and half with the filtrate.

Notes

The host strain (ATCC 47076) is a very robust culture. Only 50 µL are need per tube of soft agar.
Additional information on this culture is available on the ATCC® web site at www.atcc.org.

Material Citation

If use of this material results in a scientific publication, please cite the material in the following manner: *Escherichia coli* bacteriophage Lambda W60 (ATCC BAA-3382)

Warranty

The product is provided 'AS IS' and the viability of ATCC

® products is warranted for 30 days from the date of shipment, provided that the customer has stored and handled the product according to the information included on the product information sheet, website, and Certificate of Analysis. For living cultures, ATCC lists the media formulation and reagents that have been found to be effective for the product. While other unspecified media and reagents may also produce satisfactory results, a change in the ATCC and/or depositor-recommended protocols may affect the recovery, growth, and/or function of the product. If an alternative medium formulation or reagent is used, the ATCC warranty for viability is no longer valid. Except as expressly set forth herein, no other warranties of any kind are provided, express or implied, including, but not limited to, any implied warranties of merchantability, fitness for a particular purpose, manufacture according to cGMP standards, typicality, safety, accuracy, and/or noninfringement.

Disclaimers

This product is intended for laboratory research use only. It is not intended for any animal or human therapeutic use, any human or animal consumption, or any diagnostic use. Any proposed commercial use is prohibited without a license from ATCC.

While ATCC uses reasonable efforts to include accurate and up-to-date information on this product sheet, ATCC makes no warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. ATCC does not warrant that such information has been confirmed to be accurate or complete and the customer bears the sole responsibility of confirming the accuracy and completeness of any such information.

This product is sent on the condition that the customer is responsible for and assumes all risk and responsibility in connection with the receipt, handling, storage, disposal, and use of the ATCC product including without limitation taking all appropriate safety and handling precautions to minimize health or environmental risk. As a condition of receiving the material, the customer agrees that any activity undertaken with the ATCC product and any progeny or modifications will be conducted in compliance with all applicable laws, regulations, and guidelines. This product is provided 'AS IS' with no representations or warranties whatsoever except

as expressly set forth herein and in no event shall ATCC, its parents, subsidiaries, directors, officers, agents, employees, assigns, successors, and affiliates be liable for indirect, special, incidental, or consequential damages of any kind in connection with or arising out of the customer's use of the product. While reasonable effort is made to ensure authenticity and reliability of materials on deposit, ATCC is not liable for damages arising from the misidentification or misrepresentation of such materials.

Please see the material transfer agreement (MTA) for further details regarding the use of this product. The MTA is available at www.atcc.org.
