## Description

**Designation:** NCIB 8255 [ATH 1.1.1, S.1]

**Deposited Name:** *Rhodospirillum rubrum* (Esmarch) Molisch

**Product Description:** Type strain. Genome sequenced strain.

## Propagation

### Medium

ATCC® Medium 112: Van Niel's yeast agar

ATCC® Medium 18: Trypticase Soy Agar/Broth

### Growth Conditions

**Temperature:** 26°C

**Atmosphere:** Aerobic or anaerobic under a tungsten lamp

### Propagation Procedure

1. Put 6 to 8 mL of #112 broth into a 13 x 100 mm screw cap test tube (small). Add 3.0% cysteine (stock concentration, 2 mL/100 mL medium) and then fill the test tube to capacity with additional #112 broth. Seal the test tube with a screw cap.
2. Let the tube sit at room temperature for 30 minutes before inoculating it with the culture.
3. Allow the frozen vial to thaw at room temperature. Transfer the entire contents of the thawed aliquot into the screw cap test tube and close tightly. (You may have to remove 0.5 mL first, but be sure the test tube is refilled to capacity).
4. Several drops of the culture suspension can be used to inoculate #18 agar plates. Incubate the plates aerobically or anaerobically at 26°C. Light is not required.
5. Incubate the broth culture at 26°C under a tungsten lamp.

## Notes

After four to seven days, growth is evident by turbidity and deep red pigmentation throughout the broth. When examined microscopically, the cells appear as spiral shaped rods, in singles and chains. Once growth has been detected, the culture should be transferred to fresh broth. Subsequent growth should be detected within 48 to 72 hours.

This culture is tolerant to oxygen; therefore strictly anoxic conditions are not required when the vial is thawed at room temperature.

The culture will grow on non-selective media in the dark. Under these conditions, the strain produces colonies that start out colorless and transparent but become red and opaque over time.

Additional information on this culture is available on the ATCC® web site at [www.atcc.org](http://www.atcc.org).

## Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

## ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.
