An ampoule containing viable cells (may include spores and mycelia) suspended in 24°C to 26°C
Incubate the inoculum at the propagation conditions recommended.
From a single test tube of
Inspect for growth of the inoculum/strain regularly. The sign of viability is noticeable typically after 2–3;
longer (e.g.,
Open an ampoule according to enclosed instructions.

## Propagation

The information recommended in this section is to assist users in obtaining living culture(s) for their studies. The recommendation does not imply that the conditions or procedures provided below are optimum.

Experienced researchers may initiate the growth of a culture in their own way. The recommendation does not imply that the conditions or procedures provided below are optimum. The information recommended in this section is to assist users in obtaining living culture(s) for their studies.

### Growth Conditions

**Temperature:** 24°C to 26°C

**Atmosphere:** Typical aerobic

### Recommended Procedure

#### For freeze-dry (lyophilized) ampoules:

1. Open an ampoule according to enclosed instructions.
2. From a single test tube of sterile distilled water (5 to 6 mL), withdraw approximately 0.5 to 1.0 mL with a sterile pipette and apply directly to the pellet. Stir to form a suspension.
3. Aseptically transfer the suspension back into the test tube of sterile distilled water.
4. Let the test tube sit at room temperature (25°C) undisturbed for at least 2 hours; longer (e.g., overnight) rehydration might increase viability of some fungi.
5. Mix the suspension well. Use several drops (or make dilutions if desired) to inoculate recommended solid or liquid medium. Include a control that receives no inoculum.
6. Incubate the inoculum at the propagation conditions recommended.
7. Inspect for growth of the inoculum/strain regularly. The sign of viability is noticeable typically after 2–3 days of incubation. However, the time necessary for significant growth will vary from strain to strain.

### Notes

No special notes.

Additional information on this product may be available on the ATCC® web site at www.atcc.org.
GCATCTGCAAGGATGCTGGCGTAATGGTCATCAACGAC

Cotton fabric of Gossypium hirsutum, Warwickshire, UK

Isolation

References and other information relating to this product are available online at www.atcc.org.

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the Biosafety in Microbiological and Biomedical Laboratories from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

Disclaimers

This product is intended for laboratory research purposes only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: Stachybotrys chartarum (ATCC® 16026™).
