Designation: NCIB 8455 [DSM 14882]
Deposited Name: Ferrobacillus ferrooxidans
Leathen and Braley
Product Description: Type strain. Formerly Thiobacillus ferrooxidans. Organism used in genome sequencing project.

Medium
ATCC® Medium 2039: Acidithiobacillus ferrooxidans Medium

Growth Conditions
Temperature: 26°C
Atmosphere: Aerobic

Propagation Procedure
1. Incubate test tube cultures under above conditions upon receipt. It is helpful to incubate test tubes in a slanted position to increase gas exchange in broth. Transfer culture to fresh media within one week of arrival.
2. Gently vortex the test-tube to dislodge the iron that has oxidized onto the glass. Aseptically withdraw approximately 1.0 mL of the broth culture and transfer into 5 mL of fresh broth.
3. Incubate the broth either on a shaker or in a static and slanted position.
4. Growth is evident within one week, when yellow-orange iron oxide deposits are observed.
5. Transfer the culture approximately every two weeks.

Notes
The cells are motile and rod-shaped.

Acidithiobacillus Ferrooxidans (ATCC® 23270™)

Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: Acidithiobacillus Ferrooxidans (ATCC® 23270™)

Please see the enclosed Material Transfer Agreement (MTA) for further details regarding the use of this product. The MTA is also available on our Web site at www.atcc.org.
