Designation: VPI 1013B  
Deposited Name: Eubacterium ventriosum (Tissier) Prevot

Medium  
ATCC® Medium 1490: Modified Chopped Meat  
ATCC® Medium 260: Trypticase soy agar/broth with defibrinated sheep blood

Growth Conditions  
Temperature: 37°C  
Atmosphere: Anaerobic

Propagation Procedure  
1. Open vial according to enclosed instructions or visit www.atcc.org for instructions.  
2. Under anaerobic conditions aseptically rehydrate the entire pellet with approximately 0.5 mL of #1490 broth. Aseptically transfer the entire contents to a 5-6 mL tube of #1490 broth. Additional test tubes can be inoculated by transferring 0.5 mL of the primary broth tube to these secondary broth tubes. Best practice dictates the use of pre-reduced media.  
3. Use several drops of the primary broth tube to inoculate a #260 plate and/or #260 agar slant.  
4. Incubate in an anaerobic atmosphere at 37°C for 2-3 days. Incubate one agar plate aerobically at 37°C to check for contamination.

ANAEROBIC CONDITIONS:  
Anaerobic conditions for transfer may be obtained by the use of an anaerobic gas chamber or placement of test tubes under a gassing cannula system connected to anaerobic gas.

Anaerobic conditions for incubation may be obtained by any of the following:  
- Loose screw caps on test tubes in an anaerobic chamber  
- Loose screw caps on test tubes in an activated anaerobic gas pack jar  
- Use of sterile butyl rubber stoppers on test tubes so that an anaerobic gas headspace is retained

Intended Use  
This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain  
If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: Eubacterium ventriosum (ATCC® 27560™)
