

Product Sheet

Clostridium colinum (ATCC® 27769™)

Please read this FIRST

Storage Temp.
Frozen: -80°C or colder
Freeze-Dried: 2°C to 8°C
Live Culture: See Propagation Section

Biosafety Level
1

Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: *Clostridium colinum* (ATCC® 27769™)

Description

Designation: 72097

Deposited Name: *Clostridium colinum* Berkhoff et al.

Propagation

Medium

ATCC® Medium 1017: Chopped meat glucose medium (ATCC Medium 593) with 5.0 g glucose

Growth Conditions

Temperature: 35°C to 37°C

Atmosphere: Anaerobic

Propagation Procedure

1. Open thawed vial according to enclosed instructions or visit www.atcc.org for instructions.
2. Aseptically transfer the entire contents to a 5-6 mL tube of #1017 broth. Additional test tubes can be inoculated by transferring 0.5 mL of the primary broth tube to these secondary tubes.
3. Use several drops of the primary broth tube to inoculate a #1017 plate and #260 agar slant.
4. Incubate all tubes and plate at 35-37°C for 24-36 hours.

Notes

Check for growth often. This organism is remarkable for the inconspicuous way it grows and produces gas. Growth can be detected by examining the culture tubes, looking carefully for gas bubbles traveling from the bottom (sediment) towards the surface of the broth (don't shake the tube or you will lose the chance to see this). Once a culture starts growing it will complete its growth cycle in about 6-10 hours, time after which gas production will stop. Then the vegetative forms (and spores) will lyse quickly. This will be revealed by the presence of decolorized and distorted bacterial cells in the Gram stain. In order to successfully transfer cultures, TRANSFERS HAVE TO BE DONE FROM AN ACTIVELY GROWING CULTURE, BEFORE GAS PRODUCTION SUBSIDES. In summary, daily visual inspection of cultures to pinpoint optimum time for transfers are important. In spite of all precautions, broth culture can easily die out and it is recommended to keep the organism simultaneously growing on anaerobic blood agar plates or in roll tubes.

Additional information on this culture is available on the ATCC® web site at www.atcc.org.

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

Disclaimers

This product is intended for laboratory research purposes only. It is not intended for use in humans. While ATCC uses reasonable efforts to include accurate and up-to-date information on this product sheet, ATCC makes no warranties or representations as to its accuracy.
