Description

Designation: NCIB 11132 [Bath, MC]

Deposited Name: *Methylococcus capsulatus* Foster and Davis

Product Description: Genome sequenced strain

Propagation

Medium

ATCC® Medium 1306: Nitrate mineral salts medium (NMS)

ATCC® Medium 260: Trypticase soy agar/broth with defibrinated sheep blood

Growth Conditions

Temperature: 37°C while shaking at 160 to 180 rpm

Atmosphere: Methanogen; 50% methane - 50% air

Propagation Procedure

1. Immediately prior to working with the culture place the frozen vial at room temperature to thaw.
2. Aseptically transfer the entire contents of the vial into a single broth tube (5-6 mL) of ATCC medium #1306. Additional tubes can be inoculated by transfer of 0.1 mL to slants and 0.5 mL to broth tubes. Plate 0.1 mL of the rehydrated culture onto #260 (to test for purity). When using medium #1306, use a gas mixture of 50% methane and 50% air.
3. Incubate the culture at 37°C with shaking for 3 to 7 days. When using Medium #1306, the culture needs to be fed a mixture of 50% methane and 50% air every 24 to 48 hours for best results.
4. Growth should be detected within 3 to 7 days. No growth should occur on the nonselective plates.

Notes

Shaking enhances growth. Culture may grow without shaking but will grow faster and more turbid if shaking is used.

Medium #784 broth supports growth of this strain, but better growth occurs in medium #1306. Growth can be detected by the presence of turbidity in the broth. To detect early growth the culture may have to be examined microscopically.

No growth should occur on the nonselective media such as #260.

Additional information on this culture is available on the ATCC® web site at www.atcc.org.

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

Disclaimers

This product is intended for laboratory research purposes only. It is not intended for use in humans. While ATCC uses reasonable efforts to include accurate and up-to-date information on this product sheet, ATCC makes no warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. ATCC does not warrant that such information has been
