

Product Sheet

Oxalobacter formigenes (ATCC® 43053™)

Please read this **FIRST**

Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: *Oxalobacter formigenes* (ATCC® 43053™)

Description

Designation: Sox-4 [CIP 105951]

Deposited Name: *Oxalobacter formigenes* Allison et al.

Propagation

Medium

ATCC® Medium 1514: Modified oxalate medium (ATCC medium 1352) with 20 ml trace element solution

Growth Conditions

Temperature: 20.0°C

Atmosphere: Anaerobic

Propagation Procedure

1. Open the vial according to enclosed instructions and handle the organism using anaerobic techniques (see below).
2. Aseptically transfer 0.5 ml of #1514 broth to the vial and rehydrate the pellet. Transfer the cell suspension back into the broth tube. Inoculate a plate of a non-selective medium such as Tryptic Soy, Nutrient, or blood agar with 0.1 ml of the cell suspension.
3. Seal the tube with a rubber stopper and incubate anaerobically at 20-25°C. Incubate the plate(s) aerobically as a purity check.
4. After two or three days, growth should be evident through out the broth. Once growth has been established the culture should be transferred to fresh broth every 24 to 48 hours.
5. This culture is very sensitive to oxygen therefore steps should be taken to avoid exposure to air. When the culture exhibits good growth it will remain viable for up to 1 week if stored at 4°C under anaerobic conditions.

ANAEROBIC CONDITIONS:

- Tubes of media are placed under a gassing cannula system hooked to a source of oxygen-free gas.
- All transfers are performed while the test tubes are on the cannula system with a gentle stream of oxygen-free gas flowing through the system.
- As the test tubes are removed from the cannula system, each is sealed with butyl rubber stopper thus maintaining the anaerobic headspace.
- 100% carbon dioxide is typically employed as the oxygen-free gas source.

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

Disclaimers

This product is intended for laboratory research purposes only. It is not intended for use in humans. While ATCC uses reasonable efforts to include accurate and up-to-date information on this product sheet, ATCC makes no warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. ATCC does not warrant that such information has been confirmed to be accurate.
