

Product Sheet

Geobacter sulfurreducens (ATCC® 51573™)

Please read this **FIRST**

Storage Temp.
Frozen: -80°C or colder
Freeze-Dried: 2°C to 8°C
Live Culture: See Propagation Section

Biosafety Level
1

Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: *Geobacter sulfurreducens* (ATCC® 51573™)

Description

Designation: PCA

Deposited Name: *Geobacter sulfurreducens* Caccavo et al.

Product Description: Type strain. Genome sequencing strain.

Propagation

Medium

ATCC® Medium 1957: *Geobacter* medium

Growth Conditions

Temperature: 26°C to 30°C

Atmosphere: Anaerobic gas mixture, 80% N₂-10% CO₂-10% H₂ or 80% N₂-20% CO₂

Propagation Procedure

1. Keep vial frozen until ready to use.
2. To reduce media before inoculation, use 5% coenzyme M (0.1 mL per 10 mL). 1 M Fumarate (0.2 mL per 10 mL of broth and 0.2 mL per plate) needs to be added before inoculation. If needed, exchange the gas in the test tube for 80% N₂-20% CO₂ or 80% N₂-10% CO₂-10% H₂.
3. Under anaerobic conditions, thaw vial and then quickly transfer into a single tube of #1957 broth. A second tube of #1957 broth can also be inoculated with 0.5 mL from the original broth.
4. Incubate at 26°C to 30°C for 5 to 6 days. Subsequent transfers will grow faster following the initial recovery period.
5. Growth is evident by turbidity and an accumulation of cells at the bottom of the broth that are an orange/pink coloration.

ANAEROBIC CONDITIONS:

Anaerobic conditions for transfer may be obtained by either of the following:

- Use of an anaerobic gas chamber, or
- Placement of test tubes under a gassing cannula system hooked to anaerobic gas.

Anaerobic conditions for incubation may be obtained by any of the following:

- Loose screw caps on test tubes in anaerobic chamber,
- Loose screw caps on test tubes in an activated anaerobic gas pack jar, or
- Use of sterile butyl rubber stoppers on test tubes so that an anaerobic gas headspace is retained.

Notes

This culture grows well in broth. Incubation of up to 20 days may be required for growth on agar. Add 0.2 mL of 1M Fumarate to each plate prior to inoculation. Colonies on #1957 agar are pinpoint, circular, entire, low convex, pale orange and are best observed with a microscope.

No growth should occur on nonselective media. We strongly suggest obtaining reference Caccavo *et al.* Appl. Environ. Microbiol. 60: 37523759 (1994) for further information.

Purified genomic DNA of this strain is available as ATCC® 51573D-5™.

Additional information on this culture is available on the ATCC® web site at www.atcc.org.

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the

product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

Disclaimers

This product is intended for laboratory research purposes only. It is not intended for use in humans. While ATCC uses reasonable efforts to include accurate and up-to-date information on this product sheet, ATCC makes no warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. ATCC does not warrant that such information has been confirmed to be accurate.

This product is sent with the condition that you are responsible for its safe storage, handling, and use. ATCC is not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to insure authenticity and reliability of materials on deposit, ATCC is not liable for damages arising from the misidentification or misrepresentation of such materials.

Please see the enclosed Material Transfer Agreement (MTA) for further details regarding the use of this product. The MTA is also available on our Web site at www.atcc.org
