

Product Sheet

# *Thermococcus zilligii* (ATCC® 700529™)

Please read this FIRST

## Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

## Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: *Thermococcus zilligii* (ATCC® 700529™)

## Description

**Designation:** DSM 2770 [AN1, ANI, JCM 10554, TG 57]  
**Deposited Name:** *Thermococcus zilligii* Ronimus et al.

## Propagation

### Medium

ATCC® Medium 2094: AN 1 medium

### Growth Conditions

**Temperature:** 75.0°C

**Atmosphere:** Anaerobic

### Propagation Procedure

1. Open vial according to enclosed instructions.
2. Under anaerobic conditions, withdraw approximately 0.5 to 1.0 ml from a tube of medium #2094 with a Pasteur or 1.0 ml pipette. Re-hydrate the pellet.
3. Aseptically transfer this aliquot back into the broth tube. Mix well.
4. After 4 to 7 days of incubation at 75°C, turbidity will be observed.
5. Transfers can now be made to other tubes of broth, slants, and/or plates
6. The aerobic plates may have a thin film in the area of heaviest inoculation; however, it should show no other signs of aerobic contamination.

### ANAEROBIC CONDITIONS:

Anaerobic conditions for transfer may be obtained by either of the following:

- Use of an anaerobic gas chamber, or
- Placement of test tubes under a gassing cannula system hooked to anaerobic gas.

Anaerobic conditions for incubation may be obtained by any of the following:

- Loose screw caps on test tubes in anaerobic chamber,
- Loose screw caps on test tubes in an activated anaerobic gas pack jar, or
- Use of sterile butyl rubber stoppers on test tubes so that an anaerobic gas headspace is retained.

## Notes

The cells are irregular cocci that grow well at pH 6.0. The optimal temperature for growth is between 70-85°C but growth is also observed at 95°C. Strain produces high amounts of gas, so make sure tubes are vented. The ATCC recommends an anaerobic technique that utilizes Hungate tubes, because growth is enhanced when tubes are pressurized (20-40 psi).

Additional information on this culture is available on the ATCC web site at [www.atcc.org](http://www.atcc.org).

## References

References and other information relating to this product are available online at [www.atcc.org](http://www.atcc.org).

## Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

## ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.
