

## Product Sheet

# I1-Hybridoma (ATCC<sup>®</sup> CRL-2700<sup>™</sup>)

### Please read this FIRST

Storage Temp.  
**liquid nitrogen**  
vapor phase

---

Biosafety Level  
**1**

### Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

### Complete Growth Medium

Minimum essential medium (Eagle) with 2.0 mM L-glutamine and Hanks' BSS adjusted to contain 0.35 g/L sodium bicarbonate 80%; fetal bovine serum, 20%.

### Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: I1-Hybridoma (ATCC<sup>®</sup> CRL-2700<sup>™</sup>)

## Description

**Organism:** *Mus musculus* (B cell); *Mus musculus* (myeloma), mouse (B cell); mouse (myeloma)

**Isotype:** mouse IgG2a kappa

**Tissue:** spleen

**Disease:** Vesicular Stomatitis

**Cell Type:** hybridoma: B lymphocyte

**Age:** adult

**Morphology:** lymphoblast

**Growth Properties:** suspension

## Batch-Specific Information

Refer to the Certificate of Analysis for batch-specific test results.

## SAFETY PRECAUTION

ATCC highly recommends that protective gloves and clothing always be used and a full face mask always be worn when handling frozen vials. It is important to note that some vials leak when submersed in liquid nitrogen and will slowly fill with liquid nitrogen. Upon thawing, the conversion of the liquid nitrogen back to its gas phase may result in the vessel exploding or blowing off its cap with dangerous force creating flying debris.

## Unpacking & Storage Instructions

1. Check all containers for leakage or breakage.
2. Remove the frozen cells from the dry ice packaging and immediately place the cells at a temperature below -130°C, preferably in liquid nitrogen vapor, until ready for use.

## Handling Procedure for Frozen Cells

### Handling Procedure for Frozen Cells

To insure the highest level of viability, thaw the vial and initiate the culture as soon as possible upon receipt. If upon arrival, continued storage of the frozen culture is necessary, it should be stored in liquid nitrogen vapor phase and not at -70°C. Storage at -70°C will result in loss of viability.

**SAFETY PRECAUTION: ATCC highly recommends that protective gloves and clothing always be used and a full face mask always be worn when handling frozen vials.** It is important to note that some vials leak when submersed in liquid nitrogen and will slowly fill with liquid nitrogen. Upon thawing, the conversion of the liquid nitrogen back to its gas phase may result in the vessel exploding or blowing off its cap with dangerous force creating flying debris.

1. Thaw the vial by gentle agitation in a 37°C water bath. To reduce the possibility of contamination, keep the O-ring and cap out of the water. Thawing should be rapid (approximately 2 minutes).
2. Remove the vial from the water bath as soon as the contents are thawed, and decontaminate by dipping in or spraying with 70% ethanol. All of the operations from this point on should be carried out under strict aseptic conditions.
3. Transfer the vial contents to a centrifuge tube containing 9.0 ml complete culture medium and spin at approximately 125 x g for 5 to 10 minutes. Discard the supernatant and resuspend the cell pellet in an appropriate amount of fresh growth medium.
4. Transfer the to an appropriate size vessel.
5. Incubate the culture at 37°C in **air atmosphere** in a suitable incubator. A 5% CO<sub>2</sub> in air atmosphere is detrimental to cells when using this medium for culturing.

## Handling Procedure for Flask Cultures

### Handling Procedure for Flask Cultures

The flask was seeded with cells (see specific batch information), grown, and completely filled with medium at ATCC to prevent loss of cells during shipping.

1. Upon receipt visually examine the culture for macroscopic evidence of any microbial contamination. Using an inverted microscope (preferably equipped with phase-contrast optics), carefully check for any evidence of microbial contamination
2. Incubate the flask in an upright position for several hours at 37°C. After the temperature has equilibrated, aseptically remove the entire contents of the flask and centrifuge at 125 xg for 5 to 10 minutes. Remove shipping medium and save for reuse. Resuspend the cell pellet in 10 ml of this medium.

## Product Sheet

# I1-Hybridoma (ATCC<sup>®</sup> CRL-2700<sup>™</sup>)

- From this cell suspension remove a sample for a cell count and viability. Adjust the cell density of the suspension to  $2-5 \times 10^5$  viable cells/ml in the shipping medium.
- Incubate the culture, horizontally, at 37°C in a free gas exchange with **atmospheric air**. Maintain the cell density of the culture as suggested under the subculture procedure.

### Subculturing Procedure

**Protocol:** Cultures can be maintained by the addition of fresh medium or replacement of medium. Alternatively, cultures can be established by centrifugation with subsequent resuspension at  $1$  to  $2 \times 10^5$  viable cells/ml. Maintain cell density between  $1 \times 10^5$  and  $1 \times 10^6$  viable cells/ml.  
**Medium Renewal:** Add fresh medium every 2 to 3 days (depending on cell density)

### Cryopreservation Medium

#### Cryoprotectant Medium

Complete culture medium described above supplemented with 45% fetal bovine serum and 10% DMSO. Cell culture tested DMSO is available as ATCC Catalog No. 4-X.

### Comments

Animals were immunized with vesicular stomatitis virus, Indiana Serotype (VSV-Ind.). Spleen cells were fused with Sp2/0-Ag14 mouse myeloma cells. The antibody reacts with the major surface glycoprotein (G-protein) of vesicular stomatitis virus, Indiana Serotype (VSV-Ind.).

### Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

### ATCC Warranty

ATCC<sup>®</sup> products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC<sup>®</sup> product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

### Disclaimers

This product is intended for laboratory research purposes only. It is not intended for use in humans. While ATCC uses reasonable efforts to include accurate and up-to-date information on this product sheet, ATCC makes no warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. ATCC does not warrant that such information has been confirmed to be accurate. This product is sent with the condition that you are responsible for its safe storage, handling, and use. ATCC is not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to insure authenticity and reliability of materials on deposit, ATCC is not liable for damages arising from the misidentification or misrepresentation of such materials. Please see the enclosed Material Transfer Agreement (MTA) for further details regarding the use of this product. The MTA is also available on our Web site at [www.atcc.org](http://www.atcc.org)
