Product Sheet

Eph4 1424.2 (ATCC® CRL-3210™)

Please read this FIRST

Storage Temp. liquid nitrogen vapor phase

Biosafety Level

Organism: Mus musculus, mouse
Tissue: breast; derived from metastatic site: lung
Disease: breast cancer
Cell Type: epithelial cell
Gender: female
Morphology: epithelial-like
Growth Properties: adherent

Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Complete Growth Medium

The base medium for this cell line is ATCC-formulated DMEM Catalog No. 30-2002. To make the complete growth medium, add the following components to the base medium:
- 10% Bovine Calf Serum
- 1.2 mcg/mL Puromycin

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: Eph4 1424.2 (ATCC® CRL-3210™)

Batch-Specific Information

Refer to the Certificate of Analysis for batch-specific test results.

SAFETY PRECAUTION

ATCC highly recommends that protective gloves and clothing always be worn when handling frozen vials. It is important to note that some vials leak when submersed in liquid nitrogen and will slowly fill with liquid nitrogen. Upon thawing, the conversion of the liquid nitrogen back to its gas phase may result in the vessel exploding or blowing off its cap with dangerous force creating flying debris.

Unpacking & Storage Instructions

1. Check all containers for leakage or breakage.
2. Remove the frozen cells from the dry ice packaging and immediately place the cells at a temperature below -130°C, preferably in liquid nitrogen vapor, until ready for use.

Handling Procedure for Frozen Cells

To insure the highest level of viability, thaw the vial and initiate the culture as soon as possible upon receipt. If upon arrival, continued storage of the frozen culture is necessary, it should be stored in liquid nitrogen vapor phase and not at -70°C. Storage at -70°C will result in loss of viability.

Handling Procedure for Flask Cultures

The flask was seeded with cells (see specific batch information) grown and completely filled with medium at ATCC to prevent loss of cells during shipping.

1. Upon receipt visually examine the culture for macroscopic evidence of any microbial contamination. Using an inverted microscope (preferably equipped with phase-contrast optics), carefully check for any evidence of microbial contamination. Also check to determine if the majority of cells are still attached to the bottom of the flask; during shipping the cultures are sometimes handled roughly and many of the cells often detach and become suspended in the culture medium (but are still viable).
2. If the cells are still attached, aseptically remove all but 5 to 10 mL of the shipping medium. The shipping medium can be saved for reuse. Incubate the cells at 37°C in a 5% CO₂ in air atmosphere until they are ready to be subcultured.
3. If the cells are not attached, aseptically remove the entire contents of the flask and centrifuge at 125 x g for 5 to 10 minutes. Remove shipping medium and save. Resuspend the pelleted cells in 10 mL of this medium and add to 25 cm² flask. Incubate at 37°C in a 5% CO₂ in air atmosphere until cells are ready to be subcultured.
Subculturing Procedure

Volumes used in this protocol are for 75 cm² flasks; proportionally reduce or increase amount of dissociation medium for culture vessels of other sizes.

1. Remove and discard culture medium.
2. Briefly rinse the cell layer with Ca++/Mg++ free Dulbecco’s phosphate-buffered saline (D-PBS) or 0.25% (w/v) Trypsin - 0.53 mM EDTA solution to remove all traces of serum which contains trypsin inhibitor.
3. Add 1.0 to 2.0 mL of Trypsin-EDTA solution to flask and observe cells under an inverted microscope until cell layer is dispersed (usually within 5 to 15 minutes). Note: To avoid clumping do not agitate the cells by hitting or shaking the flask while waiting for the cells to detach. Cells that are difficult to detach may be placed at 37°C to facilitate dispersal.
4. Add 6.0 to 8.0 mL of complete growth medium and aspirate cells by gently pipetting.
5. Add appropriate aliquots of the cell suspension to new culture vessels. An inoculum of 4 X 10⁵ to 8 X 10⁵ viable cells/cm² is recommended.
6. Incubate cultures at 37°C. Subculture when the cell concentration is between 8 X 10⁴ to 1.5 X 10⁵ cells/cm².

Subcultivation ratio: A subcultivation ratio of 1:6 to 1:15 is recommended.

Medium renewal: Every 2 to 3 days

Cryopreservation Medium

Complete growth medium supplemented with an additional 10% bovine calf serum and 10% DMSO

Comments

Eph4 1424.2 was derived from BALB/c mouse xenografts initiated with Eph4 cells stably transfected with an expression vector containing Glu-Glu epitope-tagged phosphorylation site MEK1 mutant (MEKDD). Cells were derived from a metastatic tumor to the lung after selection with 1 mg/mL G418 in complete medium. This cell line stably expresses constitutively activated form of MEK1(MEKDD, Asp218/Asp222 MEK1 phosphorylation site mutant), and can be used in MEK-MAPK pathway studies. This cell line was derived from metastatic tumor and can be used to study breast cancer metastasis. Activation of MEK1 is mediated through phosphorylation of Ser218 and Ser222 by members of the Raf family of kinases.

This line related to four other cell lines: B-MEKDD 116 cell line (ATCC CRL-3069), Eph4 1424 cell line (ATCC CRL-3071), Eph4 1424.1 cell line (ATCC CRL-3209), and Eph4-Ev cell line (ATCC CRL-3063).

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the Biosafety in Microbiological and Biomedical Laboratories from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

Disclaimers

This product is intended for laboratory research purposes only. It is not intended for use in humans. While ATCC uses reasonable efforts to include accurate and up-to-date information on this product sheet,
