## Description

**Product Description:** Prostate Epithelial Cell Growth Kit (ATCC® PCS-440-040) contains components that when added to Prostate Epithelial Cell Basal Medium (ATCC® PCS-440-030) create a complete ATCC® Primary Cell Solutions™ culture environment for prostate epithelial cells derived from normal human prostate (e.g., Primary Prostate Epithelial Cells, Normal, Human, ATCC® PCS-440-010). The serum-free medium formulation is designed to support normal prostate cell morphology as well as promote rapid growth and proliferation. No feeder layers, extracellular matrix proteins or other substrates are required.

**Volume:** 1 Kit

## Directions for Use

### Unpacking and Storage Instructions

1. Check all containers for leakage or breakage.
2. Store the growth kit(s) at either -20°C in a freezer that is not self-defrosting or at -70°C for long-term storage. If thawed upon arrival, the Growth Kit can be stored at 2°C to 8°C and added to the basal medium within 72 hours of receipt.

### Preparation of Complete Growth Media

1. Obtain one growth kit from the freezer; make sure that the caps of all components are tight.
2. Thaw the components of the growth kit just prior to adding to the basal medium. Warm the L-glutamine component in a 37°C water bath and shake to dissolve any precipitates prior to adding to the basal medium.
3. Obtain one bottle of Prostate Epithelial Cell Basal Medium (485 mL) from cold storage.
4. Decontaminate the external surfaces of all growth kit component vials and the basal medium bottle by spraying with 70% ethanol.
5. Using aseptic technique and working in a laminar flow hood or biosafety cabinet, transfer the indicated volume of each growth kit component to the bottle of basal medium using a separate sterile pipette for each.

**Table 1.** Prostate Epithelial Cell Growth Kit Components

Component	Volume	Final Concentration
L-Glutamine	15 mL	6 mM
Extract P	2.0 mL	0.4%
Epinephrine	0.5 mL	1.0 mM
rh TGF-a	0.5 mL	0.5 ng/mL
Hydrocortisone hemisuccinate	0.5 mL	100 ng/mL
rh Insulin	0.5 mL	5 mg/mL
Apo-transferrin	0.5 mL	5 mg/mL

Antimicrobials and phenol red are not required for proliferation, but may be added if desired. The recommended volume of each **optional** component to be added to the complete growth media is summarized in Table 2.

**Table 2.** Addition of Antimicrobials/Antimycotics and Phenol Red (Optional)

Component	Volume	Final Concentration
Gentamicin-Amphotericin B Solution	0.5 mL	Gentamicin: 10 µg/mL Amphotericin B: 0.25 µg/mL
Penicillin-Streptomycin-Amphotericin B Solution	0.5 mL	Penicillin: 10 Units/mL Streptomycin: 10 µg/mL Amphotericin B: 25 ng/mL
Phenol Red	0.5 mL	33 µM

6. Tightly cap the bottle of complete growth medium and swirl the contents gently to assure a homogeneous solution. Do not shake forcefully to avoid foaming. Label and date the bottle.
7. Complete media should be stored in the dark at 2°C to 8°C (do not freeze). When stored under these conditions, complete media is stable for 30 days.

---

Biosafety Level  
**1**

The viability of ATCC® products is warranted for 30 days from the date of shipment, and is valid only if the product is stored and cultured according to the information included on this product information sheet. ATCC lists the media formulation that has been found to be effective for this strain. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this strain. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.
