

Product Sheet

Chlamydia muridarum

Everett et al. (ATCC® VR-123™)

Please read this **FIRST**

Storage Temp.
-70°C or colder

Biosafety Level
2

Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: *Chlamydia muridarum* Everett et al. (ATCC® VR-123™)

Description

Strain: Mouse Pneumonitis strain Nigg II
Classification: Chlamydiaceae
Original Source: Normal mice, 1939
Depositor: FB Gordon, J Schachter

Batch-Specific Information

Refer to the Certificate of Analysis for batch-specific test results.

Propagation

Propagation Host:

McCoy (ATCC® CRL-1696™)

Effect on Host:

Intracellular inclusion bodies visualized by fluorescent staining with genus or species specific conjugated antibodies

Growth Conditions

Temperature: 37°C

Recommendations for Infection: 48 hours at 37°C in McCoy cells (ATCC® CRL-1696™). Add glassbeads and vortex preparation to disrupt cells. Infect monolayer with disrupted material. Centrifuge at 3000 x rpm (750 x g) for 1 hour. Feed with fresh growth medium containing 1-2 µg/mL cycloheximide. Incubate at 37°C for 48 hours.

Incubation: 48 hours

Comments

Although this agent is not known to be pathogenic for humans, it should be handled with care. This holding has tested positive for Mycoplasma contamination. Mice receiving 1:100 dilution i.n. of infected y.s. occasionally develop pneumonia and die. The Nigg II strain was first deposited by F.B. Gordon as yolk-sac adapted material. It was subsequently redeposited as tissue culture adapted material by J. Schachter.

References

References and other information relating to this product are available online at www.atcc.org.

Key Abbreviations

CE, chicken embryo
i.n., intranasal
M, mouse
TC, tissue culture
TCID₅₀, median tissue culture infective dose
y.s., yolk sac

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

The viability of ATCC® products is warranted for 30 days from the date of shipment, and is valid only if the product is stored and cultured according to the information included on this product information sheet. ATCC lists the media formulation that has been found to be effective for this strain. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this strain. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.
