Description

Strain: C-488 (US)
Classification: Herpesviridae, Rhadinovirus
Common Name: Herpesvirus saimiri
Original Source: Derived from ATCC® VR-1396™, which came from the blood lymphocytes of a squirrel monkey (Saimiri sciureus) in New England
Depositor: H Fickenscher

Batch-Specific Information

Refer to the Certificate of Analysis for batch-specific test results.

Propagation

Propagation Host:
OMK cells (ATCC® CRL-1556™)

Effect on Host:
CPE (foci of detached cells bordered by rounded enlarged cells)

Growth Conditions

Incubation: 3 to 20 days at 37°C

Comments

ATCC® VR-1414™ (C-488 US) is derived from ATCC® VR-1396™ and is known to differ only in passage history and permit requirements. Upon deposit, both strains were confirmed to transform human T lymphocytes to antigen- and mitogen-independent, but IL-2 dependent for stable growth. Virus is stable at 4°C but titer is greatly reduced by freeze-thaw cycles. For methods of preparation see: Fickenscher, H. and B. Fieckenstein in: Methods in Molecular Genetics, 4: 345-362, Academic Press, 1994.

Key Abbreviations

°, degrees Celsius
CPE, cytopathic effect
EMEM, Eagle's Minimum Essential Medium
FBS, fetal bovine serum
OMK, owl monkey kidney cells
mL, milliliter
PHS, Public Health Service
TC, tissue culture
TCID₅₀ (TCID[50]), The Tissue Culture Infectious Dose
50% endpoint is the 50% infectious endpoint in cell culture. The TCID₅₀ is the dilution of virus that under the conditions of the assay can be expected to infect 50% of the culture vessels inoculated, just as a Lethal Dose 50% (LD₅₀) is expected to kill half of the animals exposed. A reciprocal of the dilution required to yield the TCID₅₀ provides a measure of the titer (or infectivity) of a virus preparation.
USDA, United States Department of Agriculture

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the Biosafety in Microbiological and Biomedical Laboratories from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty
The viability of ATCC® products is warranted for 30 days from the date of shipment, and is valid only if the product is stored and cultured according to the information included on this product information sheet. ATCC lists the media formulation that has been found to be effective for this strain. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this strain. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

Disclaimers

This product is intended for laboratory research purposes only. It is not intended for use in humans. While ATCC uses reasonable efforts to include accurate and up-to-date information on this product sheet, ATCC makes no warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. ATCC does not warrant that such information has been confirmed to be accurate. This product is sent with the condition that you are responsible for its safe storage, handling, and use. ATCC is not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to insure authenticity and reliability of strains on deposit, ATCC is not liable for damages arising from the misidentification or misrepresentation of cultures.

Please see the enclosed Material Transfer Agreement (MTA) for further details regarding the use of this product. The MTA is also available on our Web site at www.atcc.org.
