Description

Strain: F347

Classification: Herpesviridae, unclassified

Common Name: Koi herpesvirus

Depositor: C. Hartley

Batch-Specific Information

Refer to the Certificate of Analysis for batch-specific test results.

Propagation

Propagation Host:

Recommended Host: CCB cells (cyprinus carp brain)

Production Host: Cyprinus carp brain (CCB) cells

Effect on Host:

Nephritis, gill necrosis and death in vivo. Intracellular vacuolation in infected cell culture in vitro.

Medium:

Virus growth medium: EMEM + 10% FBS (ATCC® 30-2020) + 1x NEAA + 2mM L-glutamine + 15 mM HEPES Buffer

Growth Conditions

7-14 days at 20°C in EMEM supplemented with 10% FBS, L-glutamine and non-essential amino acids

Comments

Deposited as a useful research reagent for study of this recently identified pathogen affecting fisheries around the world. This particular isolate has not been sequenced, but several other representatives of this agent have been (Hutoran, et al.).

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

The viability of ATCC® products is warranted for 30 days from the date of shipment, and is valid only if the product is stored and cultured according to the information included on this product information sheet. ATCC lists the media formulation that has been found to be effective for this strain. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this strain. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.
