

Product Sheet

# Canine parvovirus (ATCC® VR-953™)

Please read this **FIRST**

## Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

## Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: Canine parvovirus (ATCC® VR-953™)

## Description

**Strain:** C-780916

**Classification:** *Parvoviridae*, *Parvovirus*, Feline panleukopenia virus

**Original Source:** Feces of dog with hemorrhagic enteritis, 1978

**Depositor:** LE Carmichael, New York State College of Veterinary Medicine, Cornell University

## Batch-Specific Information

Refer to the Certificate of Analysis for batch-specific test results.

## Propagation

**Propagation Host:**

A-72 (ATCC® CRL-1542™)

**Effect on Host:**

CPE, refractile cells, cell rounding and sloughing

## Growth Conditions

**Recommendations for Infection:** Plate cells 2-4 hours prior to infection and infect when cultures are 30-40% confluent. Remove medium and inoculate with a small volume of virus (e.g. 1 mL per 25 cm<sup>2</sup>) diluted to provide an optimal MOI (e.g. 0.1). Adsorb 1-2 hours at 35°C in a humidified atmosphere, rocking every 15 minutes to redistribute inoculum. End adsorption by adding virus growth medium.

**Incubation:** Incubate infected culture for 3-9 days at 35°C in a humidified atmosphere, until CPE are well advance throughout.

**Virus Growth Medium:** Leibovitz's L-15 Medium (ATCC 30-2008) + 2% FBS (ATCC 30-2020)

## Comments

Non-pathogenic for neonatal pups. Antigenically indistinguishable from Feline panleukopenia virus and Mink enteritis virus, but has broader host range and different HA spectrum, especially in regards to pH conditions. Hemagglutinates porcine, Rh+ monkey, and feline red blood cells at pH 6.0-7.5. May fail to immunize dogs if passaged 8-10 times in feline cells.

## References

References and other information relating to this product are available online at [www.atcc.org](http://www.atcc.org).

## Key Abbreviations

A/72, canine fibroma cell line

°C, degrees Celsius

CO<sub>2</sub> (CO2), carbon dioxide

CPE, cytopathic effect

CRFK, Crandell feline kidney cells

HA, hemagglutination

MOI, multiplicity of infection

Mv 1 Lu, mink lung epithelial cells

RBC, red blood cells

MOI, multiplicity of infection

## Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

## ATCC Warranty

The viability of ATCC® products is warranted for 30 days from the date of shipment, and is valid only if the product is stored and cultured according to the information included on this product information sheet. ATCC lists the media formulation that has been found to be effective for this strain. While other, unspecified media
